## Influenza-like Illness (ILI) and Other Respiratory Viruses

### Weekly Activity Report

For the week ending May 23, 2015 - Week 20

All data presented in this report are provisional and may change as additional reports are received

Quick Stats	
Percent of outpatient visits for ILI <sup>1</sup>	0.34% (baseline 1.7%)
Percent of influenza rapid test positive	2% (2/122)
Percent of RSV rapid tests positive	2% (1/51)
Percent school absence due to illness <sup>2</sup>	1.32%
Number of schools with ≥10% absence due to illness	0
Influenza-associated hospitalizations <sup>3</sup>	0/1,171 inpatients surveyed
Influenza-associated pediatric mortality (Cumulative)	3

<sup>1</sup>ILI: Influenza-like illness is defined as a fever of ≥100° F as well as cough and/or sore throat.  
<sup>2</sup>Percent school absence due to illness are reported through a weekly survey of Iowa sentinel schools  
<sup>3</sup>Hospitalizations due to influenza are voluntarily reported through a weekly survey of Iowa sentinel hospitals

### Iowa statewide activity summary:

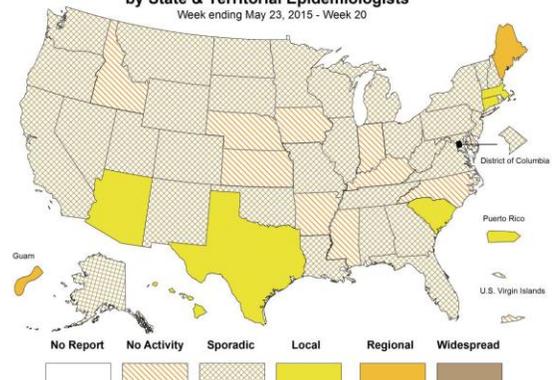

The geographic spread of influenza in Iowa is now at no activity. For this reporting week, the State Hygienic Laboratory did not detect any influenza virus; however, other respiratory viruses are still circulating Iowa. In this reporting week, five adenovirus, 12 parainfluenza virus type 3, three RSV, three hMPV, and 24 rhinovirus/enterovirus were detected from our surveillance sites. There was no influenza-associated hospitalization from sentinel hospital or school absenteeism due to influenza-like illness reported this reporting week. There have been 62 reported influenza outbreaks in Iowa long-term care facilities this influenza season and IDPH has confirmed three influenza-related deaths in children (age 0-17).

### National activity summary - (CDC):

Influenza-Like Illness (ILI) Activity Level Indicator Determined by Data Reported to ILINet  
 2014-15 Influenza Season Week 20 ending May 23, 2015

Weekly Influenza Activity Estimates Reported by State & Territorial Epidemiologists\*  
 Week ending May 23, 2015 - Week 20

**Synopsis:** During week 20 (May 17-23, 2015), influenza activity continued to decrease in the United States.

**Viral Surveillance:** Of 6,337 specimens tested and reported by U.S. World Health Organization (WHO) and National Respiratory and Enteric Virus Surveillance System (NREVSS) collaborating laboratories during week 20, 185 (2.9 percent) were positive for influenza.

**Pneumonia and Influenza Mortality:** The proportion of deaths attributed to pneumonia and influenza (P&I) was below the epidemic threshold.

**Influenza-associated Pediatric Deaths:** Two influenza-associated pediatric deaths were reported.

**Influenza-associated Hospitalizations:** A cumulative rate for the season of 65.5 laboratory-confirmed influenza-associated hospitalizations per 100,000 population was reported.

**Outpatient Illness Surveillance:** The proportion of outpatient visits for influenza-like illness (ILI) was 1.2 percent, which is below the national baseline of 2.0 percent. All 10 regions reported ILI below region-specific baseline levels. One state experienced low ILI activity; Puerto Rico, New York City, and 49 states experienced minimal ILI activity; and the District of Columbia had insufficient data.

**Geographic Spread of Influenza:** The geographic spread of influenza in Guam and one state was reported as regional; Puerto Rico and six states reported local activity; the District of Columbia and 32 states reported sporadic activity; and the U.S. Virgin Islands and 11 states reported no influenza activity.

Detailed information can be found online at [www.cdc.gov/flu/weekly/](http://www.cdc.gov/flu/weekly/)

## International activity summary - (WHO):

Globally, influenza activity has been low. In the northern hemisphere influenza activity was nearing inter-seasonal levels and in the southern hemisphere influenza activity remained low. Countries in the tropical zones reported low influenza activity with the exception of some countries in tropical Asia and West Africa. Detailed information can be found online at [www.who.int/influenza/surveillance\\_monitoring/updates/latest\\_update\\_GIP\\_surveillance/en/](http://www.who.int/influenza/surveillance_monitoring/updates/latest_update_GIP_surveillance/en/). Last updated 5/18/2015.

## Laboratory surveillance program:

The State Hygienic Laboratory (SHL) is the primary lab for influenza testing and reporting in Iowa. SHL reports the number of tests performed and the type and strain of positive tests to the influenza surveillance network several times every week. In addition, SHL surveys clinical and reference labs for the number of rapid-antigen tests performed and number positive weekly. This report also includes the positive non-influenza virus tests reported from SHL, the Dunes Medical Laboratories at Mercy Medical Center in Sioux City, and Iowa Methodist Medical Center in Des Moines.

Only cases of Iowa residents are included  
"Not subtyped" column is due to weak detections. This can be due to poor collection, timing of collection or stage of infection.

## Rapid influenza and RSV test surveillance:

The State Hygienic Laboratory (SHL) runs a weekly web-based survey program where laboratorians report the number of influenza and respiratory syncytial virus (RSV) rapid tests performed and the number of tests positive. This table includes only the number of patients tested for influenza or RSV at laboratory surveillance sites throughout the state. This table does not provide case counts.

**Table 2: Percent of influenza rapid tests positive and number of tests performed by region for the present week**

## Outpatient health care provider surveillance program (ILINet):

Outpatient health care providers who participate in the ILINet (a national influenza surveillance program) report the number of patients seen with influenza-like illness and the total number of patient visits each week. This system is a key part of Iowa's influenza surveillance. Iowa health care providers interested in joining this surveillance program should contact Kemi Oni at 515-725-2136 or [oluwakemi.oni@idph.iowa.gov](mailto:oluwakemi.oni@idph.iowa.gov) for more information.

**10 percent school absenteeism:**

Schools (K-12) track and report outbreaks of influenza-like illness when the number of students absent with illness reaches or exceeds 10 percent of total student enrollment. Regional map, below, illustrates schools with  $\geq 10\%$  absence due to illness for this current reporting week.

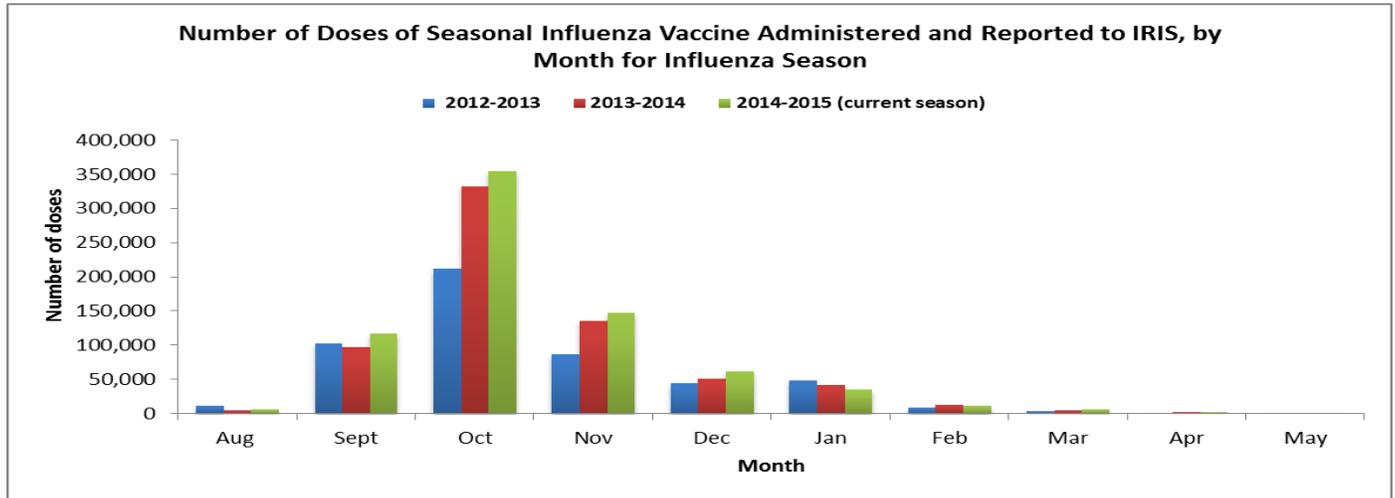

**School surveillance program:**

Sentinel schools that participate in IISN voluntarily track and report absence due to all illness (including non-influenza illnesses) and the total enrollment each week.

## Seasonal influenza vaccination:

Seasonal influenza vaccination data in Iowa is based on doses reported to the Iowa Immunization Registry Information System (IRIS). IRIS is a confidential, computerized, population-based system that tracks immunization for children, adolescents and adults who are seen in a variety of public and private healthcare provider sites throughout the state of Iowa. For more information on the immunization data, contact Kim Tichy, IRIS coordinator at 515-281-4288 or [kimberly.tichy@idph.iowa.gov](mailto:kimberly.tichy@idph.iowa.gov)

Note: The data for the 2014-2015 season is only up to the current week and there is a lag between the vaccine administration date and the date reported to the IRIS. The current season's data will be adjusted as additional data is received.
