Did you know?
Cavities are largely preventable, but tooth decay is the most common chronic disease among children and adults.

A focus on health equity
I-Smile™ assists Medicaid-enrolled, uninsured, and underinsured children and pregnant women. I-Smile™ @ School (sealant program) includes children at elementary and middle schools with 40% or greater free-and-reduced-lunch rates, and the I-Smile™ Silver pilot project works with Iowa adults who have difficulty accessing dental care. These oral health programs focus on referrals to dentists and improved access to resources that address social determinants of health through individualized care coordination. Additionally, community water fluoridation benefits everyone, regardless of age, income or socio-economic status.

What does the department do?
• Operates the I-Smile™ program, helping 23 local public health organizations promote the importance of oral health; provides preventive fluoride applications for infants, children and pregnant women; helps families make appointments and find payment sources for dental care; works with dental offices to build referral networks; and provides oral health education for families and the public to build awareness about healthy behaviors. More than 46,000 children benefited from I-Smile™ in 2020.
• Manage the evidence-based I-Smile™ @ School program through local public health organizations to provide dental screenings, fluoride, dental sealants, and oral health education for children in 1st through 8th grades. During school year 2019-2020, more than 13,500 children participated and 36,395 sealants were placed.
• Monitor fluoride levels throughout Iowa and provide education and outreach to the public about the benefits of community water fluoridation.
• Oversee oral health surveillance through data analyses and distributing reports about Iowans’ oral health status and ability to access and pay for care.
Oral Health

What does the department do? (cont.)

• Develops and administers the I-Smile™ Silver pilot project through contracts with three county health departments, to improve Iowa adults’ ability to achieve optimal oral health.
• Partner with Department on Aging, Department of Education and Department of Human Services to align program goals, leverage funding and seek optimal oral health outcomes.

Why is oral health important to Iowans? (cont.)

In 2019:
• 48% of pregnant women did not see a dentist during their pregnancy.
• 11% of pregnant women could not afford to go to the dentist or dental clinic.

In 2020:
• 63% of Iowans on public water systems had access to optimally fluoridated water.
• Less than one in five (18%) Medicaid-enrolled children ages 0-2 years saw a dentist. In comparison, over one in two (54%) Medicaid-enrolled children ages 3-12 years saw a dentist.

What can Iowans do to help?

• Learn about the importance of good oral health and how to keep your mouth healthy.
• Use the department’s oral health staff and programs as trusted sources of oral health information and policy development.
• Advocate for community water fluoridation to reduce tooth decay.
