ABOUT THE IOWA LEAD REPORT CARDS

The Iowa Department of Public Health (IDPH) is dedicated to improving the health of Iowans through numerous governmentally sponsored public health programs that are effective, efficient, well-organized and well-coordinated. One important program that impacts Iowa’s youngest residents is the Childhood Lead Poisoning Prevention Program (CLPPP). The goal of this program is to reduce the prevalence of childhood lead poisoning in Iowa. The CLPPP provides identification and case management for children with elevated blood lead levels, identification and control of lead paint hazards, surveillance of elevated blood lead levels, and provides education and outreach in communities across the state.

The Iowa Institute of Public Health Research and Policy (IIPHRP), at the University of Iowa, College of Public Health was contracted by IDPH to complete several activities related to the Childhood Lead Poisoning Prevention Program, one of which was a needs assessment of the program. The needs assessment noted a need for more data feedback at the county level that can be used for education and outreach. The need for data feedback resulted in the creation of the Iowa Lead Report Cards. These are county specific report cards that provide meaningful data that can be utilized for community and stakeholder education and outreach. The Iowa Lead Report Cards were developed in conjunction with the Iowa Childhood Lead Advisory Workgroup (CLAW) to ensure meaningful data was being communicated.

HOW TO PRINT

1. Find your county
2. Take note of the page number of your county report card, as well as the next page as these are two-sided report cards
3. Go to print settings and select to print a specified page range. Input your county specific page numbers (i.e. for Linn County, print pages 117-118)
4. Select two-sided printing with flipping on the long edge
5. Click print
6. Cut in half, as your county report card will have two report cards printed, per page
OF ALL IOWA CHILDREN 0 TO 6 YEARS OLD ONLY
25% WERE TESTED FOR LEAD

Percent of Children Receiving a Blood Lead Test By Age

- 68% of the under 6 population tested in 2019 had an elevated blood lead level*
- 1,258 KIDS

RISK FACTORS

- 66% Pre-1979 Housing
- 11% Population Below Poverty Level

*Elevated Blood Lead Level is equal to or greater than 5 mcg/dL
