Acknowledgements

The Center for Social and Behavioral Research at the University of Northern Iowa (CSBR) would like to thank the over 46,000 students who participated in the 2021 Iowa Youth Survey. We would also like to acknowledge and thank our partners at the Iowa Department of Public Health, the school coordinators and other teachers/employees for their vital role in administering the 2021 Iowa Youth Survey.

Introduction

In Spring 2021, the Iowa Department of Public Health (IDPH) secured the services of the Center for Social and Behavioral Research (CSBR) at the University of Northern Iowa (UNI) to assist in the revision, design, and implementation of the Iowa Youth Survey (IYS).

The IYS is a periodic survey of Iowa youth in grades 6th, 8th and 11th. The IYS has been administered since 1999, and there have been a number of revisions in the questionnaire content and analysis approaches over the years.1

Methods

IDPH staff were responsible for recruiting schools to participate in the 2021 IYS. This recruitment was done largely via email and web postings. All (N=327) Iowa community school districts2 (CSD) were invited to participate, with 192 public and private schools registering to participate in the 2021 IYS. Not every registered school participated (see the Profile of Participating Students).

The 2021 IYS used an online data collection mode to gather information on the health and experiences among Iowa youth. CSBR programmed the online questionnaire using Qualtrics Survey Software. The survey was administered by Iowa schools that voluntarily registered and provided students with the means (time and devices) to complete the online survey. Each of the schools provided IDPH with names and contact information for IYS coordinators who were responsible for the administration of the survey at the school when they registered their school to participate. CSBR emailed the IYS administration protocol to school coordinators and other registered contacts on September 23, 2021. The email included links to (1) instructions and a script for classroom teachers, (2) a checklist for IYS school coordinators, (3) the parental consent letters in English and Spanish, and (4) the online survey access link that was unique for that district or private school. The parental consent letter was also provided to schools during the summer, as schools were required to distribute the parental consent letters at least two-weeks prior to the survey administration. In addition, all information, except for the unique survey links, was available for download from the IDPH website.3 The consent letter was developed by IDPH and the Iowa Attorney General’s Office to allow guardians (parents) to make an informed decision about their child (or children) participating in the 2021 IYS. Parents who did not want their child (or children) to participate were asked to complete and return the “Refusal of Consent” form that was included at the end of the consent letters.

Two weeks prior to the end of data collection, a reminder email was sent to IYS coordinators at schools that were registered but had fewer than ten students complete the survey. The content of the emails can be found in the Appendix A.

Data collection began on September 27, 2021 and ended on November 19, 2021. Data collection was scheduled to end on November 12th, but was extended to November 19th to accommodate school

3 See iowayouthsurvey.idph.iowa.gov
requests. In total, 175 out of 192 registered CSDs or private schools administered the survey to at least one grade; the vast majority administered the survey to the 6th, 8th, and 11th grades. The total number of students that participated in the survey was 46,091. The total number excludes students who skipped all of the background/demographic items and those who exited the questionnaire prior to item Q20a (approximately 25% of the way through the questionnaire).

The default survey language was English. However, students had the option to switch from the English version to a Spanish version of the questionnaire – 286 students completed the questionnaire in Spanish and 45,805 completed it in English. An accessible version of the survey for students who might benefit from the use of a screen reader due to vision or literacy issues was provided, but this version was not used by any participating student.

The average time to complete the questionnaire was 22 minutes across grades. Students in the 6th grade had an average time of 28 minutes. Students in the 8th grade had an average completion time of 22 minutes. Students in the 11th grade took, on average, 17 minutes to complete the questionnaire.

**Measures**

The 2021 IYS questionnaire was revised by the CSBR in consultation with IDPH and the IYS planning committee. The goal of the revisions was to update, shorten, and streamline the questionnaire by incorporating more extensive display logic, which limits the number of items asked to students which are not applicable to them based on their provided responses to earlier items. The questionnaire contained the following broad sections:

- Student’s demographics
- Community engagement
- Physical well-being
- Gambling
- Mental health
- Beliefs and values
- Risk perceptions
- Perceptions of peer values
- Attitudes toward their school and school staff
- Illegal and/or harmful behaviors at school
- Bullying
- Perceptions of other students’ respect for diversity
- Teacher and staff perceptions
- Access to harmful substances
- Alcohol
- Tobacco
- Marijuana and other drugs
- Perceptions of parent’s attitudes

The report presents the results for each of the above sections separately by grade, sex, race/ethnicity, and sexual orientation. Each demographic is included as its own subsection with tables displaying the percentage of students who selected each response option. The percentages in all tables are rounded.
using standard round rules, and therefore, columns in each table may not sum to 100 percent. In addition, <1% indicates the percentage in that category is below 0.5% and greater than zero percent. Zero percent is only listed when no students selected that response option. The report also includes trend lines for a limited number of items where there were either no or minimal wording adjustments. The percentages for 2012, 2014, 2016, and 2018 were obtained from the 2018 IYS state report (ICSA 2019), and therefore, we are only able to present trends for comparisons featured in the 2018 IYS state report.

The full questionnaire with notes about the display logic (or skip patterns) is in Appendix B. The questionnaire was uploaded to the IDPH website in July 2021 so that schools, parents, and stakeholders who rely on IYS data could review the changes and make informed decisions regarding participation.

Profile of Participating Students

The geographical distribution of participating CSDs and students is shown in Figure 1. Green shading indicates participation. Darker shades of green depict school districts where a higher proportion of 6th, 8th, and 11th grade students participated. School districts that did not participate in the 2021 IYS are shaded gray. In addition, CSDs are outlined in yellow if a private school located within the boundaries of that CSD administered the 2021 IYS to its students.
Most participants were enrolled in public schools. Table PP1 details participation by grade separately for public and private schools.

</table>

The questionnaire began with a series of background and demographic items about the participating students including their sex, sexual orientation, race (and Hispanic/Latino/a ethnicity), parental military status, number of languages spoken at home, and previous separation from a parent/guardian due to the parent/guardian serving time in jail, prison, or in a detention center. Tables PP2 through PP7 display the percentage selecting each category by grade level.

Students were asked about their sex with binary response options female or male, and the distribution of their responses is displayed in Table PP2 for each grade. Each table in this section of the report also includes a row labeled, “Did not answer.” The instructions read by the teacher or other school personnel administering the 2021 IYS explicitly stated that students “may skip any question you (they) do not want to answer.” These verbal instructions were echoed on the online survey, which encouraged students to skip questions they did not understand, that they could not answer truthfully, or that they did not want to answer. The percentages not answering one of the participant profile items ranged from 0 to 3 percent, depending on the grade level.

<tr>
<td>Did not answer</td>
</tr>
</tbody>
</table>

Questions wording: Which of the following best describes you? Female/Male

Responses to the sexual orientation items are shown in Table PP3 for each grade. The distribution of response options selected varies by grade with a sizeable percentage of 6th graders selecting not sure. The percentage of 6th graders who either indicated they were not sure or who did not answer was higher than the percentage of 8th and 11th graders who chose those response categories.

The race categorizations, shown in Table PP4, were coded using two survey items, a single-choice item that asked, “Are you Hispanic or Latino?” and a multiple-choice item that asked, “What is your racial identity?” These items were combined into a single categorization based on IDPH data standards. Any students who selected yes for the Hispanic or Latino/a item were coded as Hispanic or Latino/a regardless of their selection(s) to the racial identity question. The racial identity item also allowed participants to write-in an identity that was not listed. The most common entry was a variation of Hispanic or Latino/a. Others specified more detailed information about their ethnicity (e.g. German, Irish, or Spanish), usually in combination with a listed racial category. Any reference to a Latin American country or Spanish/Spain was considered Hispanic or Latino/a. Other combinations of ethnic groups or ancestral heritage were coded into the corresponding group or, if appropriate based on the region, two or more races.

Parent/guardian military status, shown in Table PP5, is based on an initial item asked to all participants and a follow-up question asked only to students who reported having a parent/guardian currently in the military. The initial question was a yes/no item that asked, “Do you have a parent/guardian currently in the military?” The follow-up question was also a yes/no item that asked, “Thinking about your parent/guardian in the military, during the past 12 months, were they away for more than two weeks for training or deployment?”

Question wording: Have you ever been separated from a parent or guardian because they went to jail, prison, or a detention center? Yes/no

**Limitations**

Survey data collection, like all types of data collection, has limitations.

Although it is designed as a census, not all districts participated in the IYS. In addition, parents of children who attend registered schools may choose to withdraw consent for their child to participate. Students who do not attend a participating school and students who are homeschooled are excluded by default since the schools administer the survey on campus, directly to their students. Students who were learning virtually during the data collection period or otherwise absent on data collection day(s) at their school may not have had an opportunity to participate.

For the 2021 administration, the IYS findings likely have coverage bias owing to differential response propensity across the state. Specifically, few districts in highly-populated cities chose to participate. Among the 11 cities with a population over 50,000, the CSDs in only 4 of them participated in 2021 and no districts in the three highest populated cities participated. This same trend is also evident when considering the proportion of CSDs that participated based on their overall 2021-2022 enrollment. In 2021, 175 of 327 (54%) CSDs participated in the IYS, and only three of the nine (33%) largest school districts (with a K-12 enrollment greater than 10,000) participated. The percentage of school districts participating is shown in Table L1 separately based on the overall enrollment of the CSD.

</tbody>
</table>

Note: The table excludes the 610 participating students from private schools. Enrollment numbers were retrieved from: https://educateiowa.gov/documents/school-district-certified-enrollment/2021/12/2021-2022-certified-enrollment-district

A comparison of the self-identified racial/ethnic identity of 2021 IYS participants compared to the Iowa Department of Education’s profile can also be used to gauge the approximate resemblance of the 2021 IYS to the racial and ethnic background of Iowa students more broadly (Table L2). It is important to note that the profile includes all K-12 students and the IYS is limited to grades 6, 8, and 11. Overall, the main differences appear to be a slightly lower percentage of Black or African American students in the IYS and a slightly higher percentage of White students. This difference is consistent with the low representation of districts in the largest cities. The lack of city-centric schools may also impact other findings that tend to be associated with higher levels of student diversity.

Item non-response can also introduce bias if the individuals who decline to answer a particular survey item (or question) are different from the individuals who do answer the question. The instructions read aloud by the teacher or other school personnel administering the 2021 IYS explicitly stated that students “may skip any question you (they) do not want to answer.” These verbal instructions were also provided on the online survey, which encouraged students to skip questions they did not understand, that they could not answer truthfully, or that they did not want to answer. Students were allowed to skip any and all items, including both demographic/background items and substantive questions. Items asked near the end of the questionnaire are generally more likely to be skipped than items asked earlier. As detailed in
the Methods section of the report, students who skipped all of the demographic/background questions as well as students who failed to answer any items after Q20a (approximately 25% of the way through the questionnaire) are excluded from this report.

Caution should be exercised when comparing findings from the 2021 IYS to earlier years as the schools who participated, the question wording, and question order differ across years. The instrument is reviewed and updated with each survey administration, and seemingly minor changes in wording and order, at times, can have substantively meaningful effects. Nonetheless, this report does include some trends for a limited number of items as the information may provide some insights.
Community Engagement

All students who participated in the 2021 IYS were asked about their community engagement experiences during the current school year that were related to paid employment, community volunteerism, participation in extra-curricular activities, and participation in religious activities. The following subsections separately present these findings by grade, sex, race and ethnicity, sexual orientation, and community type.

Community Engagement by Grade

As shown in Table CE1, a substantially greater percentage of 11th graders (71%) than 8th graders (20%) and 6th graders (13%) indicated they had worked for pay during the current school year. Eleventh grade students also reported the highest rates of community volunteerism where more than one in two (53%) indicated they had volunteered to improve their community compared to 34% for 8th graders and 28% for 6th graders. Between 77% and 82% of students, depending on the grade, reported they had participated in extra-curricular activities. The percentage was highest for 8th graders at 82%, followed by 79% for 11th graders, and 77% for 6th graders. Across the grades, generally one in two students (50% to 53%) indicated they had attended religious services, programs, or activities during the current school year.

Question: During the current school year, have you...? # = Number of students responding to the item
Community Engagement by Sex

A slightly higher percentage of male students (34%) than female students (32%) reported they had worked for pay during the current school year (Table CE2). For the other three community engagement related questions, a slightly higher percentage of female students than male students indicated they had volunteered to improve their community (40% vs. 35%, respectively), participated in extra-curricular activities (82% vs. 78%), and attended religious services, programs, or activities during the current school year (53% vs. 50%).

Question: During the current school year, have you...? # = Number of students responding to the item
Community Engagement by Race/Ethnicity

The percentage of students indicating they had worked for pay during the current school year ranged from 18% to 34% across the racial/ethnic groups (Table CE3). The lowest rate was seen for students identifying as another race and the highest rate was seen for both White students and for students identifying as two or more races. There was also a wide range in the participation rates for the three other community engagement-related questions when examined by racial/ethnic group (Tables CE4 to CE5). For volunteering to improve the community, the lowest percentage indicating they had participated in this activity during the current school year occurred for Native Hawaiian or other Pacific Islander students (23%) and White students reported the highest percentage (40%; Table CE4). Participation rates in extra-curricular activities ranged from 62% for students identifying as another race to 83% for White students (Table CE5), and participation rates in religious activities ranged from 37% for students identifying as another race to 54% for White students (Table CE6).

Question: During the current school year, have you...? - Attended religious services, programs, or activities
Community Engagement by Sexual Orientation

A higher percentage of heterosexual students (35%) than students who are lesbian, gay, bisexual, or another non-heterosexual identity (LGB+; 31%) indicated they had worked for pay during the current school year (Table CE7). Higher rates were also seen for heterosexual students than for LGB+ students for the three other items in the community engagement category. The largest difference in rates between heterosexual and LGB+ students occurred for attending religious services, programs, or activities (55% vs. 34%, respectively) followed by participating in extra-curricular activities (82% vs. 73%).

Question: During the current school year, have you...? # = Number of students responding to the item
Physical Well-being

All students who participated in the 2021 IYS were asked about their physical well-being on topics related to physical activity, nutrition, homelessness, any ongoing physical or mental impairments that limit their daily activities, and whether they had experienced a concussion over the past 12 months. More specifically for the physical activity items, students were asked about the typical number of hours of screen time per day that they spend for something other than school work and the number of days that they were physically active for 60 or more minutes over the past 7 days. For nutrition, students were asked about their daily fruit intake as well as their daily vegetable intake over the past 7 days, and if they had experienced hunger in the past 30 days.

Students who reported they had experienced a concussion over the past 12 months were also asked about the number of times they experienced a concussion during this time frame. Students who indicated they had ever been homeless were also asked whether they had been homeless in the past 12 months. The following subsections separately present these findings by grade, sex, race and ethnicity, and sexual orientation.

Physical Well-being by Grade

The number of hours spent on screen time for something other than school work on an average school day by grade is shown in Table PW1. One in two 11th graders (50%) spent 4 or more hours on screen time for something other than school work compared to 45% for 8th graders and 35% for 6th graders. As shown in Table PW2, the distribution for the number of days of being physically active for a total of 60 minutes or more was somewhat comparable across the grades with a higher percentage of 8th graders (29%) reporting they were physically active all 7 days, compared to 26% for 6th graders and 25% for 8th graders.

For nutrition, one in three 6th graders (33%) indicated they ate fruit 3 or more times per day compared to 27% of 8th graders and 19% of 11th graders (Table PW3). Sixth grade students (22%) also reported the highest percentages for eating vegetables 3 or more times per day (18% for 8th graders and 14% for 11th graders; Table PW4). For each grade, fewer than 10% of students indicated they had ever gone hungry in the past 30 days (Table PW5).

Across the grade levels, approximately one in five participants indicated they have an ongoing physical, mental, or emotional disability or impairment that limits their daily activities (ranged from 16% for 6th graders to 20% for 11th graders; Table PW6). A higher percentage of 6th graders reported they experienced a concussion over the past 12 months than 8th and 11th graders (Table PW7A). Among participants indicating they had experienced a concussion over the past 12 months, 70% of 11th and 8th graders reported they had experienced a single concussion during this time frame compared to 52% of 6th graders (Table PW7A). This is equivalent to 5% of all participating students from each grade reporting they had experienced one concussion over the past 12 months (Table PW7B).

Across the grade levels, 3% of participants indicated that they had ever been homeless (Table PW8A). Among those reporting they had ever been homeless, 27% of 11th graders indicated that they had been homeless in the past 12 months compared to 18% of 6th graders and 14% of 8th graders (Table PW8A.1).
This is equivalent to 1% or fewer of all participating students reporting they had been homeless in the past 12 months (Table PW8B).

# Responding: 15,413

Question: On an average school day, about how many hours of screen time do you spend for something that is not school work? By screen time we mean time spent watching shows or videos, using a computer/tablet, playing video games, social media, apps, or using a phone for something other than calling or texting.

**Question:** Were you homeless at any time in the past 12 months?  
**Note:** The “no, never reported being homeless” category includes students who selected “no” or who “skipped” the question about ever being homeless.
Physical Well-being by Sex

A higher percentage of female students (47%) than male students (38%) indicated they spent 4 or more hours on screen time for something other than school work on an average school day (Table PW9). In contrast, the percentage of students who reported being physically active for 60 or more minutes a day for each of the past 7 days was higher for males (34%) than for females (20%; Table PW10).

About one in four students – 29% for males and 24% for females – indicated they had eaten fruit 3 or more times per day during the past 7 days (Table PW11). In comparison, nearly one in five of males (18%) and females (18%) reported eating vegetables 3 or more times per day (Table PW12). For both male and female students 6% indicated they had gone hungry in the past 30 days (Table PW13).

A higher percentage of female (21%) than male (13%) students indicated they have an ongoing physical, mental, or emotional disability or impairment that limits their daily activities (Table PW14). A similar percentage of females and males reported they had experienced a concussion (7% and 9%, respectively; Table PW15A) or that they were not sure as to whether they had a concussion from playing a sport or being physically active (14% and 16%). Among participants indicating they had experienced a concussion over the past 12 months, 40% of females and 35% of males reported they had experienced two or more concussions during this time frame (Table PW15A.1). This is equivalent to 2% of all participating females and 3% of all participating males reporting they had experienced two or more concussions over the past 12 months (Table PW15B).

For both sexes, 3% of students indicated they had been homeless (Table PW16A). Among those reporting they had ever been homeless, about one in five for female (19%) and male (20%) students indicated they had been homeless in the past 12 months (Table PW16A.1). This is equivalent to 1% of all participating students from both sexes reporting they had been homeless in the past 12 months (Table PW16B).

*Question:* On an average school day, about how many hours of screen time do you spend for something that is not school work? By screen time we mean time spent watching shows or videos, using a computer/tablet, playing video games, social media, apps, or using a phone for something other than calling or texting.

Question: Were you homeless at any time in the past 12 months?
Note. The "no, never reported being homeless" category includes students who selected “no” or who “skipped” the question about ever being homeless.
Physical Well-being by Race/Ethnicity

Between 41% to 53% of students across the race and ethnic groups indicated they spent 4 or more hours on screen time for something other than school work on an average school day (Table PW17). The lowest percentage (41%) was for White students while the highest percentage (53%) was for African American students. There was also considerable variation across the racial/ethnic groups in the percentage of students reporting being physically active for 60 or more minutes a day for each of the past 7 days; this percentage ranged from 13% for Native Hawaiian or other Pacific Islander students to 30% for American Indian or Alaskan Native students (Table PW18).

Between 25% and 41% of students, depending on their race and ethnicity, indicated they had eaten fruit 3 or more times per day during the past 7 days (Table PW19). In comparison, between 17% and 27% of students across the race and ethnic groups reported eating vegetables 3 or more times per day (Table PW20). A smaller percentage of White students (5%) than students from all other racial and ethnic groups reported they had gone hungry in the past 30 days; 8% of Asian students, 9% of students who identified as two or more races, 10% of Hispanic or Latino/a students, 11% of African American students, 11% of American Indian or Alaskan Native students, 18% of students who identified as another race, and 20% of Native Hawaiian or other Pacific Islander students responded affirmatively to ever going hungry in the past 30 days (Table PW21).

About one in ten Asian students (12%) indicated they have an ongoing physical, mental, or emotional disability or impairment that limits their daily activities; this was the lowest percentage across all the racial/ethnic groups. The highest percentage (27%) was among American Indian or Alaskan Native students (Table PW22). Sixteen percent or fewer from each racial and ethnic group reported they had experienced a concussion from playing a sport or being physically active (Table PW23A). Among participants indicating they had experienced a concussion over the past 12 months, the percentage who reported they had experienced a single concussion during this time frame ranged from 29% for Native Hawaiian or other Pacific Islander students to 68% for White students (Table PW23A.1). This is equivalent to between 5% and 6% of all participating students from each racial/ethnic group indicating they had experienced a single concussion over the past 12 months (Table PW23B).

Across the racial and ethnic groups, 2% to 11% of students indicated they have experienced homelessness (Table PW24A). The lowest percentage was among Asian and White students, and the highest percentage among American Indian or Alaskan Native students. Among the subset of students who reported they had ever been homeless, the percentage of students reporting they had been homeless in the past 12 months ranged from 11% for Asians to 24% for Hispanics or Latino/as (Table PW24A.1). This is equivalent to 2% or fewer of all participating students from each racial and ethnic group reporting they had been homeless in the past 12 months (Table PW24B).

Physical Well-being by Sexual Orientation

A higher percentage of students who are lesbian, gay, bisexual, or another non-heterosexual identity (LGB+) (57%) than heterosexual students (41%) indicated they spent 4 or more hours on screen time for something other than school work on an average school day (Table PW25). In addition, a lower percentage of LGB+ students (16%) than heterosexual students (30%) reported being physically active for 60 or more minutes a day for each of the past 7 days (Table PW26).

The percentage of students who indicated they ate fruit 3 or more times per day during the past 7 days was higher for heterosexual students (27%) than for LGB+ students (22%; Table PW27). In terms of eating vegetables, about one in five respondents – 18% for heterosexual students and 19% for LGB+ students – reported doing so 3 or more times per day (Table PW28). Additionally, a greater percentage of LGB+ students (12%) than heterosexual students (5%) indicated they had gone hungry in the past 30 days (Table PW29).

More than four in ten LGB+ students (44%) indicated they have an ongoing physical, mental, or emotional disability or impairment that limits their daily activities compared to about one in ten heterosexual students (12%; Table PW30). Concerning experiencing a concussion from playing a sport or being physically active, 8% of heterosexual and 7% of LGB+ students reported they had experienced this in the past 12 months (Table PW31A). Among participants who reported experiencing a concussion over the past 12 months, a higher percentage of LGB+ students (51%) than heterosexual students (34%) reported they had experienced a concussion two or more times during this time frame (Table PW31A.1). This is equivalent to 3% of all participating students by sexual orientation indicating they had experienced a single concussion over the past 12 months (Table PW31B).

Eight percent of LGB+ students indicated they have been homeless compared to 2% of heterosexual students (Table PW32A). Among those reporting they had ever been homeless, 23% of LGB+ students and 17% of heterosexual students reported they had been homeless in the past 12 months (Table PW32A.1). This is equivalent to less than 1% of all heterosexual participants and 2% of all LGB+ participants reporting they had been homeless in the past 12 months (Table PW32B).

Question: On an average school day, about how many hours of screen time do you spend for something that is not school work? By screen time we mean time spent watching shows or videos, using a computer/tablet, playing video games, social media, apps, or using a phone for something other than calling or texting.

Question: Were you homeless at any time in the past 12 months?  
Note. The “no, never reported being homeless” category includes students who selected “no” or who “skipped” the question about ever being homeless.
Gambling Behavior

All students who participated in the 2021 IYS were asked whether they have ever engaged in six gambling behaviors. Students who reported having engaged in these behaviors at any point were also asked about their gambling behaviors during the past 30 days. The gambling behaviors included on the IYS were: betting on sporting events, betting on internet fantasy sports, betting on card or dice games, spending money on in-game or in-app purchases, betting on games of skill, and purchasing lottery tickets. The following subsections separately present these findings by grade, sex, race and ethnicity, and sexual orientation.

Gambling Behavior by Grade

More than half of students, between 51% and 56% of students, reported that they had ever spent money on in-game or in-app purchases. The percentage was highest for 8th graders at 56%, followed by 6th graders at 54%, and 11th graders at 51% (Table GB1). The second most reported behavior was betting on cards or dice games where between 24% and 26% of students across the grades indicated they had (ever) engaged in this behavior (Table GB1).

Students who reported these behaviors were asked about their behaviors during the past 30 days. Approximately half of students who reported ever engaging in these behaviors also reported the same behaviors during the past 30 days. For example, among those students who reported that they ever spent money on in-game or in-app purchases, more than one half reported they spent money on in-game or in-app purchase during the past 30 days (Table GB1A). The percentage was highest for 11th graders at 57%, followed by 8th and 6th graders each at 54%. The gambling behavior associated with the highest percentage of engagement in the past 30 days was bet or wagered on internet fantasy sports. The percentage was highest for 11th graders with 67% reporting that they bet on internet fantasy sports during past 30 days, compared to 58% for 8th graders and 54% for 6th graders (Table GB1A).

Notes: See appendix for question wording. # = Number of students responding to item
Gambling Behavior by Sex

For most of the gambling behaviors with the exception of ever purchased lottery tickets, a higher percentage of male than female students reported past engagement with the specified gambling behaviors. For instance, 68% of male students indicated they had spent money on in-game or in-app purchases compared to 39% of female students (Table GB2). About one in four male students stated they had bet on sporting events (27%) compared to 15% of female students (Table GB2). Slightly more than one in four male students (27%) ever bet on card or dice games compared to 23% of female students (Table GB2). Fewer than one in five male students (18%) ever bet on games of skill compared to 13% of female students (Table GB2). Similarly, 17% of male students ever bet on internet fantasy sports compared to 6% of female students (Table GB2). When asked if they ever purchased lottery tickets, 8% of female and 8% of male students reported this behavior (Table GB2).

Students who reported ever engaging in these behaviors were asked about each type of betting or wagering in the past 30 days. Higher percentages of male students continued to report more gambling behaviors compared to female students. For example, among students who reported that they had ever bet on internet fantasy sports, nearly two of three male students (64%) bet on internet fantasy sports during the past 30 days compared to 49% of female students (Table GB2A). Similarly, among students who reported that they had ever spent money on in-game or in-app purchases, 60% of male students indicated they spent money on in-game or in-app purchases during past 30 days compared to 45% of female students who reported they had done so (Table GB2A).

Notes: See appendix for question wording. # = Number of students responding to item
Gambling Behavior by Race/Ethnicity

For each of the gambling behaviors the percentage of students who engaged in these behaviors varied by race/ethnicity: ever spent money on in-game or in-app purchases (ranged from 46% to 60%; Table GB6), ever bet on card or dice games (ranged from 22% to 42%; Table GB5), ever bet on sporting events (ranged from 14% to 36%; Table GB3), ever bet on games of skill (ranged from 11% to 34%; Table GB7), and ever purchased lottery tickets (ranged from 5% to 14%; Table GB8).

The type of gambling behaviors with the highest reports were for having ever spent money on in-game or in-app purchases. Three in five African American students (60%) had ever spent money on in-game or in-app purchases followed by American Indian or Alaskan Native students (59%), students who self-identified with two or more races (59%), Hispanic or Latino/a students (54%), White or Asian students (53%), Native Hawaiian or other Pacific Islander students (48%) and 46% of students who identified as another race (Table GB6). Noticeably, Native Hawaiian or other Pacific Islander students reported the highest participation for four of the six behaviors. For instance, about two in five Native Hawaiian or other Pacific Islander students (42%) had ever bet on card or dice games followed by 32% of Hispanic or Latino/a students. In addition, about one in four students from the other race/ethnicity groups reported that they had ever bet on card or dice games (Table GB5).

Students who reported these behaviors were asked about their behaviors during the past 30 days. As an example, more than half of students who reported that they had ever spent money on in-game or in-app purchases also spent money on in-game or in-app purchase during the past 30 days. More specifically, almost two in three African American students (63%) spent money on in-game or in-app purchase during the past 30 days, followed by 60% of Hispanic Latino/a students, 59% of American Indian or Alaskan Native students, 58% of students who reported 2 or more races, 56% of Asian students, 55% of students who identified as another race, and 53% of White students. The total numbers of Native Hawaiian or other Pacific Islander students and students identifying as another race are relatively small hence, direct comparisons should be made with caution (Table GB6A).

*Question: During the past 30 days, have you...? - Purchased lottery scratch off tickets or lotto numbers*
Gambling Behavior by Sexual Orientation

A higher percentage of heterosexual students than students who are lesbian, gay, bisexual, or another non-heterosexual identity (LGB+) reported engaging in two of the six gambling behaviors -- bet or wagered on sporting events and bet or wagered on an internet fantasy sports contest. About one in four heterosexual students (24%) had ever bet on sporting events compared to 14% of LGB+ students (Table GB9). Similarly, 13% of heterosexual students had ever bet on internet fantasy sports compared to 6% of LGB+ students. Students reported similar levels of endorsement for the following behaviors: ever bet on card or dice games (26%), ever spent money on in-game or in-app purchases (55%), ever bet on games of skill (16% vs. 15%), and ever purchased lottery tickets (8% vs. 10%).

Students who reported these behaviors were asked about their behaviors in the past 30 days. About half of students who reported ever engaging in these behaviors also reported the same behaviors in the past 30 days. For example, among those students who reported that they had ever spent money on in-game or in-app purchases, more than half reported they spent money on in-game or in-app purchase during the past 30 days. The percentage was slightly higher for LGB+ students (57%) compared to heterosexual students (55%) (Table GB9A).

Question: Have you ever...?  # = Number of students responding to the item
Mental Health and Suicide

All students who participated in the 2021 IYS were asked about their general mental health and presence of suicidal ideation in the past twelve months. Students who reported having thought about killing themselves were asked two additional items. Students who reported having attempted to kill themselves during the past twelve months were asked one additional item. The following subsections separately present these findings by grade, sex, race and ethnicity, and sexual orientation.

Mental Health and Suicide by Grade

Between 27% and 36% of students, depending on the grade, reported they had felt so sad or hopeless almost every day for two weeks or more in a row that they stopped doing some usual activities. The percentage was highest for 11th graders at 36%, followed by 29% for 8th graders, and 27% for 6th graders (Table MH1). Eleventh grade students also reported the highest rates of suicidal ideation where almost one in four (24%) indicated they had thought about killing themselves in the past twelve months compared to 21% for participating 8th graders and 17% for participating 6th graders (Table MH2A).

Students who reported having thought about killing themselves in the past twelve months were separately asked whether they had made a plan to kill themselves and whether they had attempted to do so during this same twelve-month period. Approximately half of the students who had thought about killing themselves had made a plan, with 47% of 6th graders, 54% of 8th graders, and 49% of 11th graders with suicidal ideation reporting they had made a plan (Table MH2A.1). This is equivalent to 8% of all participating 6th graders, 11% of all participating 8th graders, and 12% of all participating 11th graders reporting they had made a plan to kill themselves in the past twelve months (Table MH2B). Further, among the subsample of participating students who had thought about killing themselves, 24% of 6th graders, 26% of 8th graders and 20% of 11th graders reported they had tried to kill themselves during the past twelve months (Table MH2A.2). Students who attempted suicide during this time period account for 4% of 6th graders and 5% of 8th and 11th graders among the full sample of participating IYS students (Table MH2C). Approximately one in four students – 22% for 6th grade, 23% for 8th grade, and 25% for 11th grade – who attempted suicide indicated that they required medical treatment from a doctor or nurse due to an injury, poisoning, or overdose from their attempt (Table MH2A.2.1). These students who required some form of medical attention constitute approximately 1% of all participating students in each grade (Table MH2D).

| Table MH1: General mental health status measured by feeling sad or hopeless, by grade |

Question wording: If you attempted to kill yourself in the past 12 months, did any attempt result in an injury, poisoning, or overdose that had to be treated by a doctor or nurse?
Mental Health and Suicide by Sex

A greater proportion of female students (41%) than male students (20%) reported they had felt so sad or hopeless almost every day for two weeks or more in a row that they stopped doing some usual activities (Table MH3). Female students also reported higher rates of suicidal ideation than males; more than one in four (27%) females indicated they had thought about killing themselves in the past twelve months compared to 14% of males (Table MH4A).

Students who reported having thought about killing themselves in the past twelve months were then asked whether they had made a plan to kill themselves and whether they had attempted to do so during this same twelve-month period. Approximately half of the students who had thought about killing themselves had made a plan, with 52% of female students and 46% of male students with suicidal ideation reporting they had made a plan (Table MH4A.1). This is equivalent to 14% of all participating female students and 7% of all participating male students reporting they had made a plan to kill themselves in the past twelve months (Table MH4B). Further, among the subsample of participating students who had thought about killing themselves, 25% of females and 20% of males reported they had tried to kill themselves during the past twelve months (Table MH4A.2). Students who attempted suicide during this time period account for 7% of females and 3% of males among the full sample of participating IYS students (Table MH4C). Approximately one in four students who attempted suicide – 23% for females and 24% for males – required medical treatment from a doctor or nurse due to an injury, poisoning, or overdose from their attempt (Table MH4A.2.1). These students who required some form of medical attention constitute approximately 2% of all participating female students and 1% of all participating male students (Table MH4D).

Question: If you attempted to kill yourself in the past 12 months, did any attempt result in an injury, poisoning, or overdose that had to be treated by a doctor or nurse?
Mental Health and Suicide by Race/Ethnicity

A smaller proportion of White students (28%) than students from all other racial and ethnic groups reported they had felt so sad or hopeless almost every day for two weeks or more in a row that they stopped doing some usual activities; 34% of African American students, 45% of American Indian or Alaskan Native students, 30% of Asian students, 40% of Native Hawaiian or other Pacific Islander students, 41% of students who identified as another race, 41% of students who identified as two or more races, and 40% of Hispanic or Latino/a students of any race responded affirmatively (Table MH5). Non-White students also reported higher rates of suicidal ideation with the highest rate (31%) reported among students who identified as two or more races and the lowest rate among White students (19%) (Table MH6A).

Students who reported having thought about killing themselves in the past twelve months were then asked whether they had made a plan to kill themselves and whether they had attempted to do so during this same twelve-month period. Among the students who had thought about killing themselves between 44% (Asian students) and 73% (Native Hawaiian or other Pacific Islander students) had made a plan (Table MH6A.1). This is equivalent to between 9% and 19% of all participating students, depending on their race and ethnicity, reporting they had made a plan to kill themselves in the past twelve months (Table MH6B). Further, among the subsample of participating students who had thought about killing themselves, between 18% and 42% of students across racial and ethnic groups reported they had made an attempt during the past twelve months (Table MH6A.2). Table MH6C presents this same information, but with the full sample of participating students as the denominator to demonstrate the overall share of the student for each racial/ethnic group who had attempted suicide. More than one in five White, African American, Hispanic or Latino/a, and multi-racial students – 21% for White students, 30% for African American students, 27% of students who identified as two or more races, and 30% for Hispanic or Latino/a students – who attempted suicide required medical treatment from a doctor or nurse due to an injury, poisoning, or overdose from their attempt (Table MH6A.2.1). These students who required some form of medical attention constitute approximately 4% of participating American Indian or Alaskan Native students and 1-2% of all participating students in the remaining racial and ethnic groups (Table MH6D). However, the sample sizes of American Indian or Alaskan Native students, Asian students, Native Hawaiian or other Pacific Islander students, and students who identified as another race are quite small for the latter follow-up questions and hence, should be interpreted with caution.

Question: If you attempted to kill yourself in the past 12 months, did any attempt result in an injury, poisoning, or overdose that had to be treated by a doctor or nurse?
Mental Health and Suicide by Sexual Orientation

A higher percentage of students identifying as lesbian, gay, bisexual, or another non-heterosexual identity (LGB+; 67%) than heterosexual students (24%) reported they had felt so sad or hopeless almost every day for two weeks or more in a row that they stopped doing some usual activities (Table MH7). LGB+ students also reported higher rates of suicidal ideation than heterosexual students where more than one in two (55%) LGB+ students indicated they had thought about killing themselves in the past twelve months compared to 15% for participating heterosexual students (Table MH8A).

Students who reported having thought about killing themselves in the past twelve months were separately asked whether they had made a plan to kill themselves and whether they had attempted to do so during this same twelve-month period. Among the students who had thought about killing themselves, 62% of LGB+ students and 44% of heterosexual students had made a plan (Table MH8A.1). This is equivalent to 33% of all participating LGB+ students and 6% of all participating heterosexual students reporting they had made a plan to kill themselves in the past twelve months (Table MH8B). Further, among the subsample of participating students who had thought about killing themselves, 32% of LGB+ and 19% of heterosexuals reported they had tried to kill themselves during the past twelve months (Table MH8A.2). Students who attempted suicide during this time period account for 17% of LGB+ and 3% of heterosexuals among the full sample of participating IYS students (Table MH8C).

Approximately one in four students – 23% for heterosexuals and 24% for LGB+ – who attempted suicide required medical treatment from a doctor or nurse due to an injury, poisoning, or overdose from their attempt (Table MH8A.2.1). These students who required some form of medical attention constitute approximately 4% of all participating LGB+ students and 1% of all participating heterosexual students (Table MH8D).

Students’ Beliefs and Values

All students who participated in the 2021 IYS were asked to indicate how much they agree or disagree with eight different statements about their beliefs and values. Five of the eight statements were related to students’ beliefs and attitudes towards others, two additional statements were on beliefs about themselves, and one statement was about whether violence is an acceptable way to solve problems. For each statement, response options were: strongly disagree, disagree, neither agree nor disagree, agree, and strongly agree. Students were encouraged to respond honestly about their beliefs and attitudes, and not according to what they thought was an acceptable answer to others. The following subsections separately present these findings by grade, sex, race and ethnicity, and sexual orientation.

Students’ Beliefs and Values by Grade

For seven of the eight statements about their beliefs and values, a higher percentage of 6th graders than 8th and 11th graders strongly agreed with the statement (Table BV1). In particular, a greater percentage of 6th grade students than 8th and 11th grade students strongly agreed they believe it is important to help others, they care about others’ feelings, they feel sorry for others who have things stolen or damaged, they accept others who are different than themselves, they believe it is wrong to discriminate against others, they can say no when someone wants them to do something wrong or dangerous, and they believe they have much to be proud of about themselves. The largest difference in the percentage of strongly agree responses occurred for the statement about their ability to say no when someone wants them to do things they know are wrong or dangerous. Sixty-one percent of 6th graders strongly agreed with this statement compared to 50% of 8th graders and 43% of 11th graders. Additionally, when students were asked whether violence was an acceptable way to resolve conflict, a greater percentage of 6th graders (49%) than 8th graders (33%) and 11th graders (30%) strongly disagreed with this statement.

Note: SD = Strongly Disagree, D = Disagree, N = Neither Agree nor Disagree, A = Agree, SA = Strongly Agree; # = Number of students responding to the question
Students’ Beliefs and Values by Sex

A greater percentage of female students than male students strongly agreed with the following five statements about their beliefs and values toward others (Table BV2): it is important to help others (57% vs. 47%, respectively), I care about other peoples’ feelings (45% vs. 31%), I feel sorry for others who have things stolen or damaged (37% vs. 33%), I am accepting of those different from me (52% vs. 37%), and it is wrong to discriminate against others (77% vs. 63%). Additionally, a greater percentage of female students than male students strongly disagreed that violence is an acceptable way to solve problems (47% vs. 29%). On the other hand, a higher percent of male students than female students strongly agreed I [they] feel I [they] have much to be proud of (32% vs. 24%, respectively). For the statement about being able to say no to things wrong or dangerous, the distribution of responses was similar between female and male students.

Table BV2: Students’ beliefs and values, by sex

|                                | Female | | Male | | |
|--------------------------------|--------|-------|------|-------|-------|-------|

| Violence is an acceptable way to solve problems | 47% 27% 18% 5% 4% | 22,013 | 29% 25% 30% 10% 6% | 23,585 |

Note: SD = Strongly Disagree, D = Disagree, N = Neither Agree nor Disagree, A = Agree, SA = Strongly Agree; # = Number of students responding to the question
Students’ Beliefs and Values by Race/Ethnicity

For each of the following statements about students’ beliefs and values, the percentage of students who strongly agreed with the statement varied by race/ethnicity: it is important to help others (ranged from 45% to 53%; Table BV3), I care about others’ feelings (ranged from 31% to 39%; Table BV4), I feel sorry for others who have things stolen or damaged (ranged from 25% to 39%; Table BV5), I am accepting of others (ranged from 39% to 51%; Table BV6), it is wrong to discriminate against others (ranged from 66% to 75%; Table BV7), I can say no to things wrong or dangerous (ranged from 43% to 56%; Table BV8), and I feel I have much to be proud of (ranged from 21% to 32%; Table BV9). The racial/ethnic group with the lowest and highest percentage of participants who selected strongly agree also varied across the statements. When students were asked how much they agree or disagree with the statement that violence is an acceptable way to solve problems, a greater percentage of White students (39%) and Hispanic or Latino/a students (37%) than students from all other racial and ethnic groups strongly disagreed with this statement (percentages who selected strongly disagree ranged from 30% for students who identified as another race to 33% for African American students; Table BV10).

Question: For each of the following, please indicate how much you agree or disagree with each statement - Violence is an acceptable way to solve problems.
Students’ Beliefs and Values by Sexual Orientation

A greater percentage of heterosexual students than students who are lesbian, gay, bisexual, or another non-heterosexual identity (LGB+) strongly agreed with the following four statements (Table BV11): it is important to help others (52% vs. 46%, respectively), I feel sorry for others who have things stolen or damaged (35% vs. 32%), I can say no when someone wants me to do something wrong or dangerous (52% vs. 44%), and I have much to be proud of (31% vs. 13%). Moreover, a higher percentage of heterosexual students selected strongly disagree than LGB+ students to the statement that violence is an acceptable way to solve problems (38% vs. 31%, respectively). In contrast, a lower percentage of heterosexual students than LGB+ students strongly agreed they are accepting of others (40% vs. 60%, respectively) and that it is wrong to discriminate (67% vs. 83%). When students were asked to provide their level of agreement with the statement, “I care about other peoples’ feelings”, a slightly lower percent of heterosexual students selected strongly agree than LGB+ students (37% vs. 39%). However, the percentage of students agreeing or strongly agreeing with this statement was higher for heterosexual students than for LGB+ students (83% vs. 77%).

Table BV11: Student beliefs and values, by sexual orientation

|                               | Heterosexual |                       | Lesbian, Gay, Bisexual, or another identity |                       |
|                               | SD  | D   | N    | A   | SA | #    | SD  | D   | N   | A    | SA | #    |
| It is important to help others | 2%  | 1%  | 5%   | 40% | 52%| 35,168 | 2%  | 1%  | 9%  | 42%  | 46%| 6,179 |

Note: SD = Strongly Disagree, D = Disagree, N = Neither Agree nor Disagree, A = Agree, SA = Strongly Agree; # = Number of students responding to the question.
Risk Perceptions

All students who participated in the 2021 IYS were asked to think about the possible risks to physical or mental health and to indicate the level of risk associated with engaging in eleven different activities related to drinking alcohol, smoking cigarettes or using e-cigarettes, gambling, or using seven different types of drugs (such as, marijuana, methamphetamines, or cocaine) on a regular basis. The possible responses for level of risk included: little or no risk, slight risk, moderate risk, or high risk. The following subsections separately present these findings by grade, sex, race and ethnicity, and sexual orientation.

Risk Perceptions by Grade

For ten of the eleven activities asked about, close to half (and for most, more than half) of students in each grade indicated the activity was associated with a high risk to physical or mental health (Table RPI). The one exception to this result was the activity of gambling regularly where the percentage of students stating it is associated with a high risk ranged from 31% for 6th graders to 41% for 11th graders. Eleventh grade students also selected high risk at greater percentages than 6th and 8th graders for the following seven drugs or other substances: cigarettes (percentage ranged from 53% to 66%), methamphetamines (percentage ranged from 56% to 80%), cocaine (percentage ranged from 64% to 82%), amphetamines other than methamphetamines (percentage ranged from 49% to 73%), other illegal drugs (percentage ranged from 65% to 73%), over-the-counter medications (used differently than directed; percentage ranged from 44% to 53%), and prescription medication (used for non-medical reasons, percentage ranged from 47% to 59%). On the other hand, a higher percentage of 8th graders than 6th and 11th graders selected high risk for the following three substances: binge drinking alcohol (percentage ranged from 43% to 49%), marijuana (percentage from 42% to 59%), and e-cigarettes (percentage ranged from 48% to 54%).

Note: LR = Little or no risk, SR = Slight risk, MR = Moderate risk, HR = High risk; # = Number of students responding to the item. See full question and item wording in the appendix.
Risk Perceptions by Sex

For ten of the eleven activities, nearly 50% or more of female and male students identified each activity as being a high-risk threat to physical or mental health (Table RP2). In contrast, the percentage of students selecting high risk for the activity of gambling regularly was lower at 36% for females and 35% for males. For one of the activities—regular marijuana usage, female students (56%) selected high risk at a slightly greater rate than male students (51%). Otherwise, the distributions of the responses for the perceived level of risk to physical or mental health between female and male students were generally similar to one another for the remaining drugs or substances.

</tbody>
</table>

Note: LR = Little or no risk, SR = Slight risk, MR = Moderate risk, HR = High risk; # = Number of students responding to the item. See full question and item wording in the appendix.
Risk Perceptions by Race/Ethnicity

For each of the eleven activities, there was considerable variation across the racial/ethnic groups in the percentage of students identifying high for the level of risk associated with regular usage on physical or mental health. These activities included: binge drinking alcohol (percentage ranged from 42% to 57%; Table RP3), smoking cigarettes (percentage ranged from 45% to 63%; Table RP4), using marijuana (percentage ranged from 39% to 59%; Table RP5), gambling (percentage ranged from 34% to 39%; Table RP6), using methamphetamines (percentage ranged from 43% to 69%; Table RP7), using cocaine (percentage ranged from 57% to 75%; Table RP8), using amphetamines other than methamphetamines (percentage ranged from 47% to 62%; Table RP9), using other illegal drugs (percentage ranged from 53% to 72%; Table RP10), using over-the-counter medications differently than directed (percentage ranged from 39% to 49%; Table RP11), using prescription medication for non-medical reasons (percentage ranged from 38% to 54%; Table RP12), and using e-cigarettes (percentage ranged from 39% to 55%; Table RP13). Across the activities, generally either White students or Asian students were the racial/ethnic group with the largest percentage of students who selected high risk. Moreover, generally either Native Hawaiian or other Pacific Islander students or students who identified as another race were the racial/ethnic group with the largest percentage of students selecting little or no risk across the activities. However, these two latter racial/ethnic groups also had the smallest number of students responding to these questions so care should be taken in interpreting their results.

**Question:** Thinking about possible risks to physical or mental health, please indicate the level of risk for each of the following activities - Regularly using e-cigarettes (vape-pens, JUUL, hookah-pens, e-hookahs, e-cigars, e-pipes, personal vaporizers or mods).
Risk Perceptions by Sexual Orientation

For the eleven activities asked about regarding students’ perceived levels of risk on a person’s physical or mental health, a greater percentage of heterosexual students than students who are lesbian, gay, bisexual, or another non-heterosexual identity (LGB+) selected high risk for each activity (Tables RP14). The largest difference between the two student groups occurred for regular marijuana usage where 56% of heterosexual students selected high risk compared to 40% of LGB+ students. The next largest difference was associated with e-cigarette usage where the percentage selecting high risk was 54% for heterosexual students and 42% for LGB+ students. The smallest group difference in percentages was observed for regularly gambling. For this activity, 36% of heterosexual students and 33% of LGB+ students selected that the level of risk was high.

| Table RP14: Risk perceptions, by sexual orientation | Heterosexual | | | | Lesbian, Gay, Bisexual, or another identity | | | |
|---|---|---|---|---|---|---|---|---|---|
| | LR | SR | MR | HR | # | LR | SR | MR | HR | # |
| Drinking 4 (female)/5 (male) or more drinks of alcohol within a couple of hours | 18% | 10% | 25% | 47% | 34,894 | 21% | 11% | 27% | 41% | 6,137 |
| Smoking cigarettes regularly | 17% | 4% | 17% | 62% | 34,841 | 21% | 6% | 21% | 52% | 6,128 |
| Using marijuana regularly | 21% | 8% | 15% | 56% | 34,511 | 29% | 13% | 18% | 40% | 6,074 |
| Gambling regularly | 19% | 15% | 30% | 36% | 34,684 | 23% | 14% | 30% | 33% | 6,108 |
| Using methamphetamines (crank) regularly | 17% | 2% | 10% | 70% | 33,900 | 22% | 3% | 12% | 62% | 5,990 |
| Using cocaine regularly | 17% | 1% | 6% | 76% | 34,607 | 22% | 2% | 8% | 68% | 6,090 |
| Using amphetamines other than methamphetamines regularly | 17% | 4% | 16% | 63% | 33,845 | 22% | 5% | 20% | 53% | 5,996 |
| Using any other illegal drug regularly | 17% | 2% | 10% | 72% | 34,673 | 21% | 3% | 13% | 62% | 6,089 |
| Regularly using over-the-counter medications differently than directed | 18% | 7% | 25% | 50% | 34,522 | 21% | 10% | 29% | 41% | 6,076 |
| Regularly using prescription medication for non-medical reasons | 18% | 6% | 21% | 54% | 34,582 | 22% | 8% | 23% | 47% | 6,087 |
| Regularly using e-cigarettes | 17% | 8% | 21% | 54% | 34,655 | 21% | 12% | 26% | 42% | 6,097 |

Note: LR = Little or no risk, SR = Slight risk, MR = Moderate risk, HR = High risk; # = Number of students responding to the item. See full question and item wording in the appendix.
Perceptions of Peer Beliefs

All students who participated in the 2021 IYS were asked about their perceptions of other students’ beliefs about and/or acceptance of engaging in eight different behaviors. Students were asked, “About how many students in your grade would feel it is okay for you to do each of the following?” The response options were a five-point scale that ranged from “Almost none would think it is okay” to “Almost all would think it is okay.” Full statements are listed in Appendix B. In each section, the tables lists “Use an e-cigarette” instead of the complete statement, “Use an e-cigarette, JUUL, vape-pen, e-hookah, mod-box, or other electronic cigarette.”

The set of peer questions were immediately preceded by: “The questions in this section of the survey refer to the students in your school. When you read and answer these questions keep in mind the attitudes and beliefs of other students.”

Perceptions of Peer Beliefs by Grade

The general trend across all of the behaviors was that as the grade level increased, the percentage of students who selected almost none would think it is okay decreased (Table PB1). More specifically, the largest difference in the percentage who reported almost none would think it is okay occurred for using marijuana where 77% of 6th graders selected this option, compared to 51% of 8th graders and 18% of 11th graders doing so. The next largest difference in the percentage who reported almost none would think it is okay was between 6th and 11th graders for going to a party where kids were using drugs. For this behavior, 73% of 6th graders indicated almost none of their peers would think it is okay to engage in this behavior compared to 47% of 8th graders and 22% of 11th graders.

Note: ~0 = Almost none would think it is ok, Few = A few would think it is ok, Some = Some would and some wouldn't think it is ok, Most = Most would think it is ok, ~All = Almost all would think it is ok; # = Number of students responding to item
Perceptions of Peer Beliefs by Sex

Across all the behaviors asked about, a higher percentage of male students than female students indicated that almost none of their classmates would think it is okay for them to engage in these behaviors. The largest difference in the percentage selecting almost none between the sexes occurred for attending a party where their peers were using drugs; for this behavior, 54% of males and 42% of females selected almost none would think this is okay.

For both sexes the behavior associated with the highest percentage of students selecting almost none was seen for using any illegal drug other than alcohol, cigarettes, or marijuana (55% for females and 62% for males). On the other hand, the behavior associated with the lowest percentage of students from both sexes selecting almost none would think it is okay occurred for using e-cigarettes (29% for females and 38% for males).

Perceptions of Peer Beliefs by Race/Ethnicity

Across all the behaviors asked about and across all racial/ethnic groups either a majority or a plurality of responding students indicated that almost none of the students in their grade would feel it is okay for them to engage in the specified behavior. A majority of students from each racial/ethnic group (53%-62%) indicated almost none of the students in their grade would think it is okay for them to use any illegal drug other than alcohol (Table PB3E). Across all behaviors and across all racial/ethnic groups, the percentage of students reporting that almost all of the students in their grade would think the activity is okay never exceeded 9%; peer beliefs about using e-cigarettes ranged between 4% (Asian students) and 9% (American Indian or Alaskan Native and students identifying as 2 or more races) of students indicated almost all would think it is okay.

*Question:* About how many students in your grade would feel it is okay for you to do each of the following? - Use prescription drugs for non-medical reasons
Perceptions of Peer Beliefs by Sexual Orientation

Across all the behaviors asked about, a higher percentage of heterosexual students than lesbian, gay, bisexual or another non-heterosexual identity (LGB+) students indicated that almost none of their classmates would think it is okay for them to engage in these behaviors. The largest difference in the percentage who reported almost none between these groups occurred for smoke cigarettes; for this behavior, 45% of heterosexual and 33% of LGB+ students selected almost none would think this is okay.

For both groups the behavior associated with the highest percentage of students selecting almost none was for using any illegal drug other than alcohol, cigarettes, or marijuana (59% for heterosexuals and 49% for LGB+ students). Conversely, the behavior associated with the lowest percentage of students across sexual orientation selecting almost none occurred for using e-cigarettes (33% for heterosexual and 24% for LGB+ students).

Student Attitudes Toward School

All students who participated in the 2021 IYS were asked to indicate their level of agreement with eleven different statements about their school. For each statement, response options were: strongly disagree, disagree, neither agree nor disagree, agree, and strongly agree. Four of eleven statements were related to students’ personal attitudes toward school, two statements were about school communication with the student’s parent/guardian, four statements were on school resources, and one statement was about the student’s peers being welcoming toward new students. The following subsections present the findings for these questions by grade, sex, race and ethnicity, and sexual orientation.

Student Attitudes Toward School by Grade

A consistent finding by grade was that a greater percentage of 6th graders than 8th and 11th graders strongly agreed with ten of the eleven statements (Table AS1). More specifically, a greater percentage of 6th grade students than 8th and 11th grade students strongly agreed they feel safe at school, they care about school, they put forth their best effort in school, their school informs their parent/guardian when they do a good job, their school informs their parent/guardian when they do something wrong, there is at least one adult at the school they can go to for help, their peers make new students feel welcome at their school, their school has up-to-date technology, their school has available space for extra-curricular activities, and their school building is well maintained. Nearly one in three 6th grade students (32%) strongly agreed they feel safe at school compared to approximately one in five 8th grade students (21%) and 11th grade students (19%). In contrast, a greater percentage of 11th graders (78%) than 8th graders (71%) and 6th graders (65%) strongly disagreed with the statement, “I do not plan to finish high school.”.

Student Attitudes Toward School by Sex

A slightly greater percentage of male students than female students strongly agreed with the following three statements about their attitudes toward school and staff: I feel safe at school (27% vs. 22%, respectively; Table AS2), my school informs my parent/guardian when I do a good job (25% vs. 22%), and my school informs my parent/guardian when I do something wrong (38% vs. 34%). Conversely, a greater percentage of female students than male students strongly agreed that they put forth their best effort in school (48% vs. 40%) and their school has up-to-date technology (34% vs. 31%). A higher percentage of female students (74%) than male students (68%) strongly disagreed with the statement about not planning to finish high school. For the remaining statements, the distribution of responses was similar between female and male students.

Student Attitudes Toward School by Race/Ethnicity

For each of the following statements about students’ attitudes toward school and staff, the percentage of students who strongly agreed with the statement varied by race/ethnicity: I feel safe in school (ranged from 15% to 25%; Table AS3), I care about my school (ranged from 20% to 29%; Table AS4), I try to do my best in school (ranged from 38% to 49%; Table AS5), my school lets my parent/guardian know if I do a good job (ranged from 21% to 28%; Table AS7), my school lets my parent/guardian know if I have done something wrong (ranged from 29% to 41%; Table AS8), there is at least one adult at school that I can go to for help with a problem (ranged from 30% to 41%; Table AS9), my peers try to make new students feel welcome in school (ranged from 16% to 25%; Table AS10), my school has up-to-date computers and other electronic equipment available to students (ranged from 20% to 34%; Table AS11), my school has space and facilities for extra-curricular activities (ranged from 23% to 36%; Table AS12), and my school building is well maintained (ranged from 23% to 32%; Table AS13). Not only did the percentage of students who strongly agreed with these statements differ by race/ethnicity, the racial/ethnic group associated with the lowest and highest rates of strong agreement also tended to vary across the statements. All values are presented in Tables AS3-AS13 below.

To highlight a few of the findings, a greater percentage of White students (41%) than students from all other racial and ethnic groups strongly agreed there is at least one adult at the school they can go to for help (Table AS9). Additionally, students’ level of agreement with the statement about not planning to finish high school was highest among African Americans and students identified as another race where 6% and 8%, respectively, strongly agreed with the statement (Table AS6).

Question: For each of the following, please indicate how much you agree or disagree with each statement - My school building is well maintained
Student Attitudes Toward School by Sexual Orientation

A consistent finding by sexual orientation was that a greater percentage of heterosexual students strongly agreed with ten of the eleven statements related to school and staff attitudes compared to students who are lesbian, gay, bisexual, or another non-heterosexual identity (LGB+) (Table AS14). Specifically, a higher percentage of heterosexual students than LGB+ students strongly agreed they feel safe at school (26% vs. 11%), they care about school (26% vs. 15%), they put forth their best effort in school (44% vs. 34%), their school informs their parent/guardian when they do a good job (23% vs. 18%), their school informs their parent/guardian when they do something wrong (37% vs. 30%), there is at least one adult at the school they can go to for help (40% vs. 32%), their peers make new students feel welcome at their school (20% vs. 14%), their school has up-to-date technology (33% vs. 26%), their school has available space for extra-curricular activities (35% vs. 26%), and their school building is well maintained (31% vs. 22%). The greatest difference between heterosexual and LGB+ students occurred for the statement about feeling safe at school where 73% of heterosexual students agreed or strongly agreed with this statement compared to 45% of LGB+ students.

Note: SD = Strongly Disagree, D = Disagree, N = Neither Agree nor Disagree, A = Agree, SA = Strongly Agree; # = the number of students responding to that item.
Illegal or Violent Behavior

Students who participated in the 2021 IYS were asked about their direct experience with eleven different illegal and/or violent behaviors. Specifically, students were asked, “In the past 12 months, have you done any of the following on school property or at a school event?” The statements included: carried a gun, knife, club or other weapon that is not used for a school activity like archery, kendo, skeet shooting, etc.; used alcohol or other illegal drugs; used cigarettes, smokeless tobacco (chewing tobacco, snuff, plug, dipping tobacco, snus), or e-cigarettes (vape-pens, hookah-pens, e-hookahs, e-cigars, e-pipes, personal vaporizers or mods); had your belongings (clothing, books, bike, car) stolen or deliberately damaged; been disciplined for fighting, theft, or damaging property; been threatened or injured by someone with a weapon (like a gun, knife or club); damaged property on purpose (like breaking windows, scratching a car, etc.); hit, kicked, or fought someone because they made you angry; used a weapon, force, or threats to get money or things from someone; verbally threatened to physically harm someone; and stolen something. The list also included a statement designed to identify and prevent students from selecting the same response for each item, helped a friend or classmate with a problem they were having; this item is not displayed in the tables. These twelve items were displayed to student respondents across two screens/pages, with six statements per page.

Illegal or Violent Behavior by Grade

The most frequent illegal or violent behavior that 6th and 8th grade students reported taking place on school property or at a school event in the past 12 months was having hit, kicked, or fought someone because they made the student angry, at 23% and 19%, respectively (Table IV1). Approximately one in ten (9%) 11th graders had hit, kicked, or fought someone in the past 12 months at school. In a follow-up question, 6th grade students reported this was most often directed at a sibling, while 11th graders reported that this behavior was most often directed at someone else (e.g. friends, classmates, peers; Table IV1a). The most reported behavior among 11th graders was having had your belongings (clothing, books, bike, car) stolen or deliberately damaged, with 12% indicating this had occurred. Having belongings stolen or deliberately damaged was the second most common illegal or violent behavior reported by 6th and 8th graders at 16% and 18%, respectively.

*Question:* What is your relationship with the person or persons you hit, kicked, or fought in the past 12 months?
Illegal or Violent Behavior by Sex

The two most frequent illegal or violent behaviors that females and males reported taking place on school property or at a school event in the past 12 months was having hit, kicked, or fought someone because they made the student angry and having had belongings (clothing, books, bike, car) stolen or deliberately damaged. A higher percentage of male students than female students reported each of these had occurred (Table IV2). More than one in five male students (21%) reported having hit, kicked, or fought someone compared to 14% of females. In a follow-up question, female students reported this was most often directed at a sibling, while for male students, it was most often directed at someone else for males (e.g. friends, classmates, peers, Table IV2a). Slightly more males (17%) than females (14%) reported having belongings stolen or deliberately damaged in the past 12 months on school property or at a school event. For the remaining nine illegal or violent behaviors, the percent who experienced the listed statement ranged from 1% to 7% for females and 1% to 11% for males. The least common occurrence for both sexes was having used a weapon, force, or threats to get money or things from someone at 1%.

Question: What is your relationship with the person or persons you hit, kicked, or fought in the past 12 months?
Illegal or Violent Behavior by Race/Ethnicity

The two most frequent illegal or violent behaviors across all racial and ethnic groups that students reported taking place on school property or at a school event in the past 12 months was having hit, kicked, or fought someone because they made the student angry and having had belongings (clothing, books, bike, car) stolen or deliberately damaged (Tables IV3-IV13). The percentage who responded affirmatively that they had experienced these behaviors ranged from 14% to 21% for having belongings stolen or damaged at school and ranged from 12% to 34% for having hit, kicked or fought someone because they made the responding student angry. Across all eleven illegal or violent behaviors, the percentage of students who selected, yes, was lowest among Asian students.

Illegal or Violent Behavior by Sexual Orientation

A higher percentage of lesbian, gay, bisexual, or another non-heterosexual (LGB+) students who are compared to heterosexual students reported that each of the eleven illegal or violent activities had occurred on school property or at a school event in the past 12 months (Table IV14). The two most reported illegal or violent behaviors for both groups were having hit, kicked, or fought someone because they made you angry (16% heterosexuals, 23% for LGB+ students) and having had your belongings (clothing, books, bike, car) stolen or deliberately damaged (15% heterosexuals, 24% for LGB+ students). The least common occurrence for both groups was having used a weapon, force, or threats to get money or things from someone at 1% for heterosexuals and 2% for LGB+ students.

Question: What is your relationship with the person or persons you hit, kicked, or fought in the past 12 months?
Bullying Behaviors

All students who participated in the 2021 IYS were asked how often they experienced seven different types of bullying behaviors in the past 30 days. The response options were a five-point scale that ranged from “has not occurred” to “more than 10 times.” For each type of bullying behavior that the student reported experiencing, they were subsequently asked, “What, if anything, do you think may have made you a target of the following behavior?” and were asked to check all examples that applied to them. The listed response options included: my race, country of origin, or ethnicity; my culture; my religion; my sexual orientation; my gender; another reason; and don’t know/not sure. Students were also asked how often they had done the same seven bullying behaviors to someone at school in the past 30 days using the same five response options from “has not occurred” to “more than 10 times”. Students were also asked how often school staff attempted to stop bullying and if they stayed home from school in the past 30 days because they felt unsafe going to or being at school.

The set of bullying questions were immediately preceded by: “The following questions are about bullying. Bullying is unwanted, aggressive behavior among school-aged children that involves a real or perceived power imbalance (such as the use of physical strength, access to embarrassing information, or popularity to control or harm others). Bullying can occur in person or through technology.”

Bullying Behaviors by Grade

A majority of students across each of the grades reported they had not experienced the specified type of bullying in the past 30 days with the exception of the statement was about having been called names, made fun of, or teased in a hurtful way, where more than half of 6th and 8th graders reported they had experienced that form of bullying at least once in the past 30 days (Table BB1). For each grade, the percentage of students reporting they had been called names, made fun of, or teased in a hurtful way (at least once in the past 30 days) was higher than the percentages in the 2012, 2014, 2016, and 2018 IYS (Figure BB1).

For six of the seven types of bullying, the percentage of students indicating they had NOT experienced that type of bullying was higher for 11th graders than 6th and 8th graders. Across all types of bullying and grades, students who experienced bullying most frequently indicated that they did not know/ were not sure what made them the target of the specified bullying behaviors and/or a reason not listed was the perceived cause (Tables BB2-BB4).

For each of the seven forms of bullying, a strong majority of students across all grades reported they had not engaged in that type of behavior at school in the past 30 days (Table BB5). The form of bullying that was most prevalent among students in each grade was name calling, making fun of, or teasing another student. Specifically, 22% of 6th graders, 26% of 8th graders, and 19% of 11th graders reported they had engaged in that behavior one or more times in the past 30 days while at school (Table BB5).

Students in the 6th grade reported at higher rates than students in other grades that school staff attempted to stop bullying when they knew about it. Specifically, more than half of 6th graders (59%) indicated school staff almost always or often attempted to stop bullying compared to 45% among 8th graders and 36% among 11th graders (Table BB6). Approximately one in ten students (10% for 6th grade; 9% for 8th
and 11th grades) reported that they have stayed home from school because they felt unsafe going to or being at school in the past 30 days (Table BB7).

# = number responding to that item
Figure BB1: Percent reporting they were called names, made fun of, or teased in a hurtful way in the past 30 days.

Note: The figure plots the percentage who selected any of the following response options: occurred 1 time, occurred 2-4 times, occurred 5-10 times, or occurred >10 times in the past 30 days.

2021 Question wording: In the past 30 days, how often have the following occurred, if at all? I was called names, was made fun of, or teased in a hurtful way. Response options: has not occurred, occurred 1 time, occurred 2-4 times, occurred 5-10 times, or occurred >10 times.

Previous question wording: In the last 30 days, how many times have you been bullied at school in the ways listed below: I was called names, was made fun of, or teased in a hurtful way? Response options: 0 times, 1 time, 2 times, 3-5 times, 6-10 times, and 11 or more times.

Question: In the past 30 days, did you ever stay home because you felt unsafe going to school or being at school?
Bullying Behaviors by Sex

A higher percentage of female than male students reported they had experienced six of the seven forms of bullying asked about at least once in the past 30 days. Males, on the other hand, reported being hit, kicked, pushed, or shoved in a way meant to harm me [them] more than female students, where 80% of females reported this type of behavior had NOT occurred compared to 73% of male students (Table B8). Across all types of bullying and both sexes, students who experienced each form of bullying most frequently indicated that they did not know/were not sure what made them the target of the specified bullying behaviors and/or a reason not listed was the perceived cause (Tables BB9-BB10).

For each of the seven types of bullying, the majority of students across all grades reported they had not engaged in that type of behavior at school in the past 30 days. The form of bullying toward others that was most prevalent for both sexes was name calling, making fun of, or teasing another student (Table BB11). Across all seven items, a higher percentage of females (81%-98%) compared to males (74%-96%) reported they had NOT bullied another student in the listed manner in the past 30 days (Tables BB11).

Males reported, at higher rates than females, that school staff attempted to stop bullying when they knew about it. Specifically, half of male students indicated school staff almost always (26%) or often (24%) attempt to stop bullying compared to 22% almost always and 22% often for female students (Table BB12). More than one in ten females (12%) reported they stayed home from school because they felt unsafe going or being at school in the past 30 days compared to 7% for males (Table BB13).

Question: In the past 30 days, did you ever stay home because you felt unsafe going to school or being at school?
Bullying Behaviors by Race/Ethnicity

A higher percentage of American Indian or Alaskan Native students than students from all other racial and ethnic groups reported they had experienced five of the seven forms of bullying at least once in the past 30 days. Asian students, on the other hand, were the racial/ethnic group where the highest percentage indicated they had NOT experienced the specified form of bullying in the past 30 days for six of the seven forms of bullying (Tables BB14-BB20). However, among Asian students who experienced bullying, one of the main reasons they perceived they were bullied was their race, country of origin, or ethnicity (Tables BB14A-BB20A).

For each of the seven forms of bullying, a majority of students across all racial and ethnic groups reported they had not engaged in that type of behavior at school in the past 30 days. The form of bullying that was most prevalent among all racial and ethnic groups was name calling, making fun of, or teasing another student (Table BB21-BB27).

The percentage of students who reported they stayed home from school because they felt unsafe going to or being at school in the past 30 days ranged from 8% for White and Asian students to 18% for students who indicated they identified with another race that was not listed as a response option (Table BB29).

Question: In the past 30 days, did you ever stay home because you felt unsafe going to school or being at school?
Bullying Behaviors by Sexual Orientation

Students who identify as lesbian, gay, bisexual, or another non-heterosexual identity (LGB+) indicated that they had experienced each of the seven forms of bullying in the past 30 days at a higher percentage than heterosexual students (Table BB30). LGB+ students often perceived their sexual orientation as a reason that they were bullied, with selections ranging from 22% to 49% (Table BB32).

For each of the seven forms of bullying, a majority of both heterosexual and LGB+ students reported they had NOT engaged in that type of behavior at school in the past 30 days. The form of bullying that was most prevalent for both groups was name calling, making fun of, or teasing another student (Tables BB31-BB32). Across all seven bullying items, a higher percentage of heterosexual students (77%-97%) compared to LGB+ students (74%-96%) reported they had NOT bullied another student in a specified manner in the past 30 days (Table BB33).

Heterosexual students reported at higher rates than LGB+ students that school staff attempted to stop bullying when they knew about it. Specifically, about half (49%) of heterosexual students indicated school staff almost always or often attempted to stop bullying compared to 33% among LGB+ students (Table BB34). More than one in five LGB+ students (22%) reported they stayed home from school in the past 30 days because they felt unsafe going to or being at school compared to 7% among heterosexual students (Table BB35).

Question: In the past 30 days, did you ever stay home because you felt unsafe going to school or being at school?
Perceptions of Other Students’ Respect for Diversity

All students who participated in the 2021 IYS were asked about their beliefs of other students in their school. The students were asked, “Please indicate how much you agree or disagree with each of the following statements,” followed by six different statements regarding students’ respect of others based on different situations or demographics such as gender, sexual orientation, or learning disabilities. The response options were a five-point scale that ranged from strongly disagree to strongly agree.

Perceptions of Other Students’ Respect for Diversity by Grade

In general, more 6th graders (compared to 8th and 11th graders) reported they either agreed or strongly agreed that students in their school respect other people regardless of the listed demographic attribute (Table RD1). Of the 6th grade students, 36% reported that they strongly agreed other students respected others regardless of race, ethnicity, or skin color or of cultural or religious differences compared to 14% of 11th graders who strongly agreed. Across the demographics inquired about, the highest percentage of students who disagreed or strongly disagreed that students respect others was for the gender and the sexual orientation statements.

Perceptions of Other Students’ Respect for Diversity by Sex

More male students tended to report they either agreed or strongly agreed that other students have respect for diversity compared to the female students (Table RD2). For example, male students (49%) reported higher agreement (agree or strongly agree) that students respect others regardless of gender than female students (39%).

**Note:** SD = Strongly Disagree, D = Disagree, N = Neither Agree nor Disagree, A = Agree, SA = Strongly Agree; # = Number of students responding to the item
Perceptions of Other Students’ Respect for Diversity by Race/Ethnicity

For all six of the demographic characteristics asked about on this section of the questionnaire and for all racial and ethnic groups, more students agreed (agree/strongly agree) than disagreed (disagree/strongly disagree) that students in their school respect other people regardless of the listed demographic characteristic (Tables RD3A to RD3F). There was some variation across groups. For example, a higher percentage of White students (25%) and Native Hawaiian or other Pacific Islander (29%) reported they strongly agreed that students in their school respect others regardless of race or ethnicity (Table RD3B). As another example, twenty percent of students who identified as either another race or two or more races reported that they strongly disagreed that students in their school respect others regardless of sexual orientation (Table RD3F).

Question: Please indicate how much you agree or disagree with each of the following statements - Students in this school respect other people regardless of their sexual orientation.
Perceptions of Other Students’ Respect for Diversity by Sexual Orientation

A higher percentage of heterosexual students reported they either agreed or strongly agreed students in their school respect others regardless of the listed attribute compared to students who are lesbian, gay, bisexual, or another non-heterosexual identity (LGB+; Table RD4). For example, LGB+ students reported higher disagreement that students respect others regardless of sexual orientation with 53% of LGB+ students either somewhat or strongly disagreeing compared to 28% of heterosexual students on the same item.

Student Perceptions of Teachers & Staff

All students who participated in the 2021 IYS were asked to indicate how much they agree or disagree with nine statements about their perceptions of teachers and staff at their school. For each statement, response options were: strongly disagree, disagree, neither agree nor disagree, agree, and strongly agree. Three of nine statements were related to students’ perceptions of teacher caring and feedback, the other six statements were about the perceived respect that staff showed for a variety of dimensions of diversity such as racial/ethnic differences and physical disabilities. The following subsections present the findings for these items by grade, sex, race and ethnicity, and sexual orientation.

Student Perceptions of Teachers & Staff by Grade

Across grades with one exception, the majority of students agreed with all of the positive statements about teacher and staff support and respect for diversity (Table TS1). For students in 11th grade, only 45% agreed or strongly agreed that teachers notice when I am [they are] doing a good job and let me [them] know about it compared to 72% for 6th graders and 54% for 8th graders. For all other items, the majority of students in each grade agreed or strongly agreed with the statements. Additionally, across statements, student agreement declined as the grades increased. That is, more 6th graders than 8th graders agreed with each of the items and more 8th grade students than 11th grade students agreed with the items. Although 11th grade students had the lowest agreement among the various items, in no case did more than 23% disagree with an item, which occurred for the statement about teachers notice when they are doing a good job and letting them know about it.

Student Perceptions of Teachers & Staff by Sex

Overall, female students strongly agreed at a lower rate than male students in regards to statements reflecting staff respect for various dimensions of diversity. The most disparate views were evident where a lower percentage of female students than male students strongly agreed that staff in this school respect gender differences (32% for females compared to 39% for males) and that staff in this school respect all sexual orientations (33% for females compared to 39% for males; Table TS2). This trend held but the differences were not as great for the other items.

Student Perceptions of Teachers and Staff by Race/Ethnicity

All racial and ethnic groups were generally positive in their assessments of teachers and staff at their school. White students and Asian students generally reported the strongest agreement (by agreeing or strongly agreeing) with each statement while students identifying as another race or identifying as two or more races had the lowest agreement percentages about teachers and staff (Tables TS3 to TS11). For example, 71% of both White and Asian students agreed or strongly agreed that their teachers care about them. In contrast, 59% of multi-racial students either agreed or strongly agreed that their teachers care about them (Table TS3). One of the largest racial/ethnic group differences in the combined percentage of students who agreed or strongly agreed occurred for the statement about staff in this school respecting racial/ethnic/skin color differences. Eighty-five percent of Whites agreed or strongly agreed with this statement compared to 72% of African American students, 76% of American Indian or Alaskan Native students, 80% of Asian students, 74% of Native Hawaiian or other Pacific Islander students, 67% of students identifying as another race, 72% of students identifying as two or more races, and 75% of Hispanic or Latino/a students (Table TS7).

Question: For each of the following, please indicate how much you agree or disagree with each statement - Staff in this school respect students with physical disabilities
Student Perceptions of Teachers and Staff by Sexual Orientation

Overall, while the majority of both groups agreed that teachers and staff were caring and respectful of differences, students who are lesbian, gay, bisexual, or another non-heterosexual identity (LGB+) were less likely than heterosexual students to report they strongly agreed with any of the items (Table TS12). This disparity was most pronounced in differences in levels of strong agreement for respecting gender differences (LGB+, 24%; heterosexual, 36%) and respecting all sexual orientations (LGB+, 23%; heterosexual, 37%).

Ease of Access to Harmful Substances and Items

All students who participated in the 2021 IYS were asked about their beliefs on ease of access to eight different substances and items. The students were asked, “How easy or hard do you think it would be for someone your age to get each of the following:” followed by the eight different substances or items. The response options were a four-point scale that ranged from very hard to very easy as well as a don’t know/not sure option.

Ease of Access to Harmful Substances and Items by Grade

Among the substances and items asked about, students reported at the highest percentages for each grade that it would be very hard to access any other illegal drug including methamphetamine, heroin, cocaine, or another illegal drug for someone their age. More specifically, 55% of 6th graders, 37% of 8th graders, and 24% of 11th graders reported it would be very hard to access any other illegal drug including methamphetamine, heroin, cocaine, or another illegal drug (Table HS1). On the other hand, across the substances and items, 6th and 8th graders reported very easy access at the highest percentages for lottery or scratch tickets. Of 6th grade students, 15% reported that it would be very easy to access lottery or scratch tickets for students their age. Comparatively, 21% of 8th graders and 22% of 11th graders reported it would be very easy to access lottery or scratch tickets. Eleventh graders selected very easy (43%) at the highest percentage across the substances or items for having access to e-cigarettes or other vaping products. In comparison, 20% of 8th graders and 5% of 6th graders reported it would be very easy to access e-cigarettes or other vaping products for students their age. Among 11th graders, the substance or item with the second highest frequency for being very easy to access for students their age was alcohol (39%).

</table>

Note: VH = Very hard, H = Hard, E = Easy, VE = Very easy, DK = Don't know/Not sure; # = Number of students responding to the item. Some substances included examples and/or alternative names; see Appendix B for the full wording.
Ease of Access to Harmful Substances and Items by Sex

In general, more male students reported it would be hard or very hard to access the various substances or items asked about compared to female students (Table HS2). Twenty-five percent of female students reported it would be very easy to access e-cigarettes or other vaping products compared to 20% of male students. Of the male students, 42% reported any other illegal drug (such as methamphetamine, heroin, cocaine, etc.) as very hard to access compared to 35% of female students.

</table>

Note: VH = Very hard, H = Hard, E = Easy, VE = Very easy, DK = Don't know/Not sure; # = Number of students responding to the item. Some substances included examples and/or alternative names; see Appendix B for the full wording.
Ease of Access to Harmful Substances and Items by Race/Ethnicity

For each of the substances or items, the distribution of responses varied across the racial/ethnic groups (Tables HS3A to HS3H). For example, 20% of American Indian or Alaskan Native students reported it would be very hard to access cigarettes whereas 37% of Native Hawaiian or other Pacific Islander students reported they didn’t know or were not sure about how easy or hard it would be to access cigarettes for someone their age (Table HS3A). When participants were asked about their access to other illegal drugs (such as methamphetamine, heroin, or cocaine) the percentage who selected very hard for this substance ranged from 30% for Native Hawaiian or other Pacific Islander students to 40% for White students (Table HS3E). For access to prescription medication that was not prescribed for them, the percentage of students who reported it would be either easy or very easy to access this type of substance ranged from 24% for Native Hawaiian or other Pacific Islander students to 35% of students identifying as two or more races (Table HS3G).

Question: How easy or hard do you think it would be for someone your age to get each of the following? - Lottery or scratch tickets.
Ease of Access to Harmful Substances and Items by Sexual Orientation

In general, all students regardless of sexual orientation reported responses very similarly for most of the questions on ease of access to harmful substances or items (Table HS4). One exception was access to prescription medicine that is not prescribed for them, where 40% of LGB+ students reported it would be either easy or very easy to access prescription medicine that is not prescribed for them compared to 31% of heterosexual students.

Alcohol Use

All students who participated in the 2021 IYS were asked a series of questions about their alcohol use. Students who reported having had a drink of alcohol at least once in their life were asked two additional items. Students who reported having had a drink of alcohol in the past 30 days were asked ten additional items. The following subsections separately present these findings by grade, sex, race and ethnicity, and sexual orientation.

Alcohol Use by Grade

Across the grades, 11th graders had the highest reports of having had at least one alcoholic drink in their lifetime (Table AU1A) with 50% of 11th grade students who consumed at least one alcoholic drink in their lifetime reporting they had their first alcoholic drink when they were 15-16 years old (Table AU1B). Students who reported having at least one drink in their lifetime were subsequently asked if they have had at least one drink in the past 30 days. Of those students, reports of drinking in the past 30 days steadily increased across the grades with approximately one in five 6th graders (21%) who have ever had alcohol, a third of 8th graders (32%) who have ever had alcohol, and almost half of 11th graders (46%), who have ever had alcohol, having at least one alcoholic drink in the past 30 days (Table AU1C). This is equivalent to 2% of all 6th graders, 6% of all 8th graders, and 18% of all 11th graders having an alcoholic beverage in the past 30 days; for each of these grades, the percentage in 2021 is lower than the percentage reported in the 2018 IYS (Figure AU1).

Across all students, 1% of 6th graders, 3% of 8th graders, and 10% of 11th graders reported drinking beer in the past 30 days (Table AU1A) compared to 1% of 6th graders, 5% of 8th graders, and 16% of 11th graders who reported drinking some other type of alcohol in the past 30 days. Approximately half of 11th graders (51%) who have had at least one alcoholic drink in the past 30 days reported exhibiting binge drinking behavior, 4 drinks for females or 5 drinks for males within a two-hour period, at least once in the past 30 days (Table AU1C.1). The percentage of students in each grade who reported binge drinking is lower than the percentages reported in the 2012, 2014, 2016, and 2018 IYS (Figure AU2).

Among the 6th graders who reported having had an alcoholic drink in the past 30 days, the majority (43%) of them received the alcohol from their parents or guardians (Table AU2B). Forty-four percent of 8th graders who had an alcoholic drink in the past 30 days reported getting their alcohol by taking it from their parent or guardians’ cabinet or refrigerator. The most common method of getting alcohol for 11th graders who had an alcoholic drink in the past 30 days was reported as getting it at a party at 48%, and the second most common method was from a friend under 21 giving it to them at 40%.

Across all students, 5% of 6th and 8th graders reported operating either a car or another motorized vehicle while impaired due to alcohol or drugs, whereas 7% of 11th graders reported doing so (Table AU1A).

**Question:** In the past 30 days, did you get alcohol in the following ways? # = Number of students responding to item
Alcohol Use by Sex

The same percentage (23%) of male and female students reported having had at least one alcoholic beverage in their lifetime (Table AU3A). Among those students who have ever had a drink of alcohol, a higher percentage of female students (40%) reported having at least one alcoholic drink in the past 30 days compared to male students (34%; Table AU3C). A higher percentage of male students (69%) reported drinking beer in the past 30 days compared to female students (46%; Table AU3C.1); however, a higher percentage of female students (88%) reported drinking another type of alcoholic drink in the past 30 days compared to male students (76%) among those who reported consuming an alcoholic beverage in the previous 30 days. Less than half of both female (41%) and male (44%) students who have had at least one alcoholic drink in the past 30 days reported exhibiting binge drinking behavior, 4 drinks for females or 5 drinks for males within a two-hour period, at least once in the past 30 days (Table AU3A).

Among the students who reported having had an alcoholic drink in the past 30 days, both female and male students reported receiving their alcohol from similar sources with the most commonly reported method, across both sexes, accessing it at a party (Table AU4A and AU4B). The second most common method across female and male students was a friend under 21 giving it to them. The least common method for both sexes was purchasing the alcohol themselves (15% of male students and 9% of female students).

Across all students, a slightly higher percentage of male students reported operating either a car or another motorized vehicle while impaired due to alcohol or drugs compared to female students (Table AU4A).

Question: In the past 30 days, did you get alcohol in the following ways? # = Number of students responding to item
Alcohol Use by Race/Ethnicity

Across all races, American Indian or Alaskan Native students as well as those students who identified as two or more races had the highest rates (28%) of having at least one alcoholic drink in their lifetime (Table AU5A) and Asian students had the lowest (13%). White students who have ever consumed alcohol reported having their first drink at an older age compared to students from other races and ethnicities who have also ever consumed alcohol (Table AU5B.1). Students who reported having at least one drink in their life were also asked about drinking in the past 30 days. Among students who have ever consumed alcohol, White students, Hispanic or Latino/a, and those students identifying as another race reported the highest percentage of having at least one alcoholic drink in the past 30 days (Table AU6A.1), while African American and American Indian or Alaskan Native students had the lowest reports at 30%. Across all students who had an alcoholic drink in the past 30 days, a majority of students from each race/ethnic group reported they had consumed beer in the past 30 days (Table AU7A.1) whereas over 60% across all races/ethnicities reported drinking another type of alcohol with Native Hawaiian or other Pacific Islander students reporting the highest percent of drinking another type of alcohol at 91% (Table AU7B.1). Slightly over half of the American Indian or Alaskan Native (53%) and Native Hawaiian or other Pacific Islander (55%) students who have had at least one alcoholic drink in the past 30 days reported exhibiting binge drinking behavior, 4 drinks for females or 5 drinks for males within a two-hour period, at least once in the past 30 days (Table AU8B). A little under half of the White students (42%), Hispanic or Latino/a students (41%), and those students who indicated two or more races (44%) also reported exhibiting binge drinking behavior.

Across all students who reported having had an alcoholic drink in the past 30 days, getting alcohol at a party was the most prevalent means of obtaining alcohol for White (38%), African American (37%), Asian (39%), and Hispanic or Latino/a (43%) students in the past 30 days (Table AU9E.1). Having a friend under 21 give them alcohol was the highest reported method for Native Hawaiian or other Pacific Islander students as well as those students indicating two or more races at 64% and 37%, respectively (Table AU9F.1). Forty-seven percent of American Indian or Alaskan Native students (who have ever consumed alcohol) reported receiving alcohol via giving someone money to buy it for them (Table AU9B.) or via a friend under 21 giving it to them in the past 30 days (Table AU9F.1).

Across all students, the percentage who reported operating either a car or another motorized vehicle while impaired due to alcohol or drugs ranged from 2% of Asian students to 9% for Native Hawaiian or other Pacific Islander students (Table AU10).

Question: Have you ever driven a car or other motorized vehicle (ATV, tractor, moped) after using any amount of alcohol, recreational or non-prescribed drugs?
Alcohol Use by Sexual Orientation

A higher percentage of lesbian, gay, bisexual, or another non-heterosexual identity (LGB+) students compared to heterosexual students reported having an alcoholic drink at least once in their lifetime (Table AU11A), with LGB+ students reporting having their first alcoholic drink at earlier ages than heterosexual students (Table AU11B). Students who reported having at least one drink in their life also were asked about consuming an alcoholic beverage in the past 30 days. Among students who reported ever consuming an alcoholic beverage, a similar percentage of heterosexual (38%) and LGB+ (37%) students reported having at least one alcoholic drink in the past 30 days (Table AU11C). A higher percentage of heterosexual students who have ever consumed an alcoholic beverage, (60%) reported drinking beer in the past 30 days compared to LGB+ students who have ever consumed an alcoholic beverage, (40%; Table AU11C.1); however, a higher percentage of LGB+ students (87%) reported drinking another type of alcoholic drink in the past 30 days compared to heterosexual students (81%). Slightly under half of both heterosexual (42%) and LGB+ (41%) students who have had at least one alcoholic drink in the past 30 days reported exhibiting binge drinking behavior, 4 drinks for females or 5 drinks for males within a two-hour period, at least once in the past 30 days.

Among the students who reported having had an alcoholic drink in the past 30 days, a higher percentage of heterosexual students (40%) reported obtaining their alcohol from a party compared to other methods (Table AU12B). A higher percentage of LGB+ students (45%) reported taking the alcohol from their parent or guardians’ cabinet or refrigerator compared to 29% of heterosexual students who had consumed an alcoholic beverage. The second most common method reported across heterosexual and LGB+ students was a friend under 21 giving it to them (Table AU12B).

Across all students, a similar percentage of heterosexual (5%) and LGB+ (6%) students reported operating either a car or another motorized vehicle while impaired due to alcohol or drugs (Table AU11A).

Question: In the past 30 days, did you get alcohol in the following ways? # = Number of students responding to item
Tobacco Use

All students who participated in the 2021 IYS were asked about their use of tobacco and nicotine products including cigarettes, cigars, smokeless tobacco, water pipes or hookah, heated (heat-not-burn) tobacco products, and electronic nicotine products. Students who reported having ever used tobacco or nicotine products were also asked about current (past 30 day) use, age of first use, quit attempts in the past 12 months, and average number of cigarettes smoked per day (among current smokers). The following subsections separately present these findings by grade, sex, race and ethnicity, and sexual orientation.

Tobacco Use by Grade

The percentage of students who reported having ever used tobacco or nicotine products by grade is shown in Table T1. Across the grades, 10% of 11th grade students, 4% of 8th grade students, and 1% of 6th grade students reported having ever smoked or used any tobacco products (not including e-cigarettes). Nearly one-quarter (24%) of 11th grade students reported having ever used an e-cigarette, JUUL, vape-pen, e-hookah, mod-box, or other electronic cigarette compared to 10% of 8th grade students and 4% of 6th grade students. The percent of students reporting having ever used heated (heat-not-burn) tobacco products was low across the grades (1% of 6th, 2% of 8th, and 4% of 11th grade students).

Among 6th grade students who reported having used an electronic nicotine product, 42% reported first use between 11-12 years old (Table T1A). Among 8th grade students who reported having used an electronic nicotine product, 41% reported first use between 11-12 years old and another 40% reported first use between 13-14 years old (Table T1B). Among 11th grade students who reported having used an electronic nicotine product, 43% reported first use between 15-16 years old and another 38% reported first use between 13-14 years old (Table T1C).

Table T2 shows the percentage of students reporting current (past 30 days) tobacco and nicotine product use by grade and type of product. The highest percent of students reporting current use was for electronic nicotine products (e.g. e-cigarette, JUUL, vape-pen, e-hookah, mod-box, or other electronic cigarette) with 13% of 11th grade, 4% of 8th grade, and 1% of 6th grade students reporting use in the past 30 days. Among 11th grade students, 3% reported having smoked cigarettes, 3% reported having smoked menthol cigarettes, 2% reported having smoked cigars, and 2% reported having used smokeless tobacco in the past 30 days. One percent or less of students in 8th grade or 6th grade reported current use of any other tobacco or nicotine product.

The percentage of students who reported smoking cigarettes in the past 30 days is displayed visually in Figure T1 for 2021 IYS and the previous four IYS data collection years (2012-2018). The percentage of both 8th and 11th graders who reported smoking cigarettes during the past 30 days was lower in 2021 than any previous year during this time period. The percentage of 6th graders match the previous low (from 2016) at less than 1 percent (or 0.4 percent, to be exact).

Among students who smoked cigarettes in the past 30 days, most reported having smoked less than one cigarette per day on average (Table T2A). Among 11th grade students who reported current smoking,
58% smoked <1 cigarette per day, 17% smoked 2 to 5 cigarettes per day, and 10% smoked 1 cigarette per day on average.

Table T3 shows the percent of students who stopped smoking cigarettes or using electronic nicotine products in the past 12 months because they were trying to quit. Among all student participants, 12% of 11\textsuperscript{th} grade students and 6% of 8\textsuperscript{th} grade students reported having stopped using electronic nicotine products in the past year because they were trying to quit.

Among students who reported having ever smoked or used tobacco products, 60% of 6\textsuperscript{th} grade, 55% of 8\textsuperscript{th} grade, and 41% of 11\textsuperscript{th} grade students reported having stopped smoking in the past 12 months because they were trying to quit (Table T3A). Among students who reported having used electronic nicotine products, 61% of 6\textsuperscript{th} grade, 59% of 8\textsuperscript{th} grade, and 51% of 11\textsuperscript{th} grade students reported having stopped using electronic nicotine products in the past 12 months because they were trying to quit.

Figure T1: Percent of students who smoked cigarettes in the past 30 days

Note: Question wording: In the past 30 days, on how many days have you: Smoked cigarettes?
Tobacco Use by Sex

A higher percentage of female students (14%) than male students (11%) reported having ever used an electronic nicotine product (Table T4). Similar percentages of female students and male students reported having ever used tobacco products (not including e-cigarettes) or heat-not-burn products. Among female students, 4% reported having ever used tobacco products, and 2% reported having ever used heat-not-burn products. Among male students, 5% reported having ever used tobacco products, and 2% reported having ever used heat-not-burn products.

Among female students who reported having used an electronic nicotine product, 23% reported first use between 11-12 years old and another 36% reported first use between 13-14 years old (Table T4A). Among male students who reported having used an electronic nicotine product, 22% reported first use between 11-12 years old and another 32% reported first use between 13-14 years old (Table T4B).

Table T5 shows the percentage of students who reported current (past 30 days) tobacco and nicotine product use by sex and type of product. The highest percentage of students reporting current use was for electronic nicotine products (e.g. e-cigarette, JUUL, vape-pen, e-hookah, mod-box, or other electronic cigarette) with 7% of females and 5% of males reporting use in the past 30 days.

Among students who smoked cigarettes in the past 30 days, most reported having smoked less than one cigarette per day on average (Table T5A). Among female students who reported currently smoking, 62% smoked <1 cigarette per day, 17% smoked 2 to 5 cigarettes per day, and 13% smoked 1 cigarette per day on average. Among male students who reported currently smoking, 53% smoked <1 cigarette per day, 18% smoked 2 to 5 cigarettes per day, and 8% smoked 1 cigarette per day on average.

Table T6 shows the percentage of students who stopped smoking cigarettes or using electronic nicotine products in the past 12 months because they were trying to quit. Among all student participants, this represents 7% of female students and 6% of male students who reported having stopped using electronic nicotine products in the past year. Among students who reported having ever smoked or used tobacco products, 46% of female students and 48% of male students reported having stopped smoking in the past 12 months because they were trying to quit (Table T6A). Among students who reported having used electronic nicotine products, 54% of female students and 54% of male students reported having stopped using electronic nicotine products in the past 12 months because they were trying to quit.

Question: In the past 12 months, have you...? # = Number of students responding to item
Tobacco Use by Race/Ethnicity

Between 2% and 10% of students across the racial and ethnic groups indicated they had ever used tobacco products (not including e-cigarettes; Table T7). The highest percentage (10%) was among American Indian or Alaskan Native students followed by 6% of Native Hawaiian or other Pacific Islander students. Similar percentages of White (5%) students and Hispanic or Latino/a (5%) students reported having ever used tobacco products.

Table 7A shows the age when students first smoked a whole cigarette among those who reported having ever use tobacco products by race and ethnic groups. The highest percentage of students who reported having smoked their first whole cigarette before age nine was among Hispanic or Latino/a students (14%). Among African American students who have ever used tobacco products, 16% reported having smoked their first whole cigarette between 9-10 years old. Among White students who have ever used tobacco products, 19% reported having smoked their first whole cigarette between 15-16 years old. Table T7B and Table T7C show the age of first use for smokeless tobacco and menthol cigarette, respectively.

Table 8 shows the percentage of students who reported having ever used electronic nicotine products. Percentages range from 7% to 18% across race and ethnic groups. Among the largest race and ethnic groups in the survey, 12% of White students, 15% of Hispanic or Latino/a students, and 11% of African American students reported having ever used electronic nicotine products. Among those, more than one in ten (12%) African American students report having first used an electronic nicotine product between the ages of 9-10 (Table T7A). A lower percentage - 2% of White students, 2% of African American students, and 3% of Hispanic or Latino/a students reported having ever used heat-not-burn tobacco products (Table T9). Among those, 15% of White students reported first use of a heat-not-burn tobacco product between the ages of 11-12 years (Table T9A).

Current use (past 30 days) of tobacco or nicotine products varied by type of product across race and ethnic groups. Current use of cigarettes was highest among American Indian or Alaskan Native students (3%; Table T10). Among students who smoked cigarettes in the past 30 days, most reported having smoked less than one cigarette per day on average (Table T10A). Among White students who reported current smoking, (59%) smoke less than 1 cigarette per day, 18% smoked 2 to 5 cigarettes per day and 11% smoked 1 cigarette per day on average.

Similar percentages of current use of menthol cigarettes were reported by American Indian or Alaskan Native (2%) students and Hispanic or Latino/a (2%) students (Table T11). Past 30 day use of cigars (Table T12), smokeless tobacco (Table T13), water pipe or hookah (Table T14), or heat-not-burn products (Table T16) ranged from <1% to 2% across all race or ethnic groups. Among the largest race and ethnic groups in the survey, 6% of White students, 7% of Hispanic or Latino/a students, and 5% of African American students reported having used electronic nicotine products in the past 30 days (Table T15).

The percentage of students who stopped smoking cigarettes or using electronic nicotine products in the past 12 months because they were trying to quit varies by type of product. Among all participants, 6% of American Indian or Alaskan Native students, 3% of Hispanic or Latino/a students, 2% of White students, and 2% of African American students reported having stopped smoking cigarettes in the past...
12 months because they were trying to quit (Table T17). Across all race or ethnic groups among just those students who reported having ever used tobacco products, about half (range: 46% to 61%) stopped smoking cigarettes for one day or more in the past 12 months because they were trying to quit (Table T17A). Among all participants, 10% of American Indian or Alaskan Native students, 8% of Hispanic or Latino/a students, 6% of White students, and 6% of African American students reported having stopped using electronic nicotine products in the past 12 months because they were trying to quit (Table T18). Across all racial or ethnic groups among just those students who reported having ever used electronic nicotine products, over half (range: 54% to 77%) stopped using electronic nicotine products for one day or more in the past 12 months because they were trying to quit (Table T18A).

Question: In the past 12 months have you stopped using e-cigarettes, JUUL, vape-pen, e-hookah, mod-box, or other electronic cigarette for one day or longer because you were trying to quit?
Tobacco Use by Sexual Orientation

A higher percentage of lesbian, gay, bisexual, or another non-heterosexual identity (LGB+) students than heterosexual students reported having ever smoked or used tobacco products (not including e-cigarettes; 9% of LGB+ vs. 4% of heterosexual students), having ever used an electronic nicotine product (22% vs. 11%) or having ever used a heat-not-burn tobacco product (4% vs. 2%; Table T19).

Among heterosexual students who reported having used an electronic nicotine product, 35% reported first use between 13-14 years old and another 21% reported first use between 11-12 years old (Table T19A). Among LGB+ students who reported having used an electronic nicotine product, 34% reported first use between 13-14 years old and another 26% reported first use between 11-12 years old (Table T19B).

Table T20 shows the percentage of students who reported current (past 30 days) tobacco and nicotine product use by sexual orientation and type of product. The highest percentage of students who reported current use was for electronic nicotine products (e.g. e-cigarette, JUUL, vape-pen, e-hookah, mod-box, or other electronic cigarette) with 11% of LGB+ students reporting use in the past 30 days compared to 5% of heterosexual students. Among LGB+ students, 3% reported current use of cigarettes compared to 1% of heterosexual students.

Among students who smoked cigarettes in the past 30 days, most reported having smoked less than one cigarette per day on average (Table T20A). Among LGB+ students who reported currently smoking, 55% smoked <1 cigarette per day, 20% smoked 2 to 5 cigarettes per day, and 12% smoked 1 cigarette per day on average. Among heterosexual students who reported currently smoking, 58% smoked <1 cigarette per day, 17% smoked 2 to 5 cigarettes per day, and 9% smoked 1 cigarette per day on average.

Table T21 shows the percentage of students who stopped smoking cigarettes or using electronic nicotine products in the past 12 months because they were trying to quit. Among all student participants, 11% of LGB+ students and 6% of heterosexual students reported having stopped using electronic nicotine products in the past year.

Among students who reported having ever smoked or used tobacco products, 52% of LGB+ students and 45% of heterosexual students reported having stopped smoking in the past 12 months because they were trying to quit (Table T21A). Among students who reported having used electronic nicotine products, 51% of LGB+ students and 55% of heterosexual students reported having stopped using electronic nicotine products in the past 12 months because they were trying to quit.

Question: In the past 12 months, have you…?  # = Number of students responding to item
Use of Marijuana and Other Drugs

All students who participated in the 2021 IYS were asked a series of questions about past use of marijuana and other drugs. Specifically, students were asked if they have ever used marijuana (pot, grass, hash, bud, weed), and if yes, were also asked if they used it in the past 30 days and how old they were when they first tried marijuana. In addition to marijuana, students were asked about current use of ten other drugs. Consistent with prior IYS administration years, marijuana is the only substance where students were asked if they ever used it and their age of first use.

Use of Marijuana and Other Drugs by Grade

Sixteen percent of 11th graders reported that they have previously used marijuana compared to 4% of 8th graders and 1% percent of 6th graders (Table MD1A). The percentage who reported using marijuana in the past 30 days is approximately half of the percentage who reported they ever used marijuana for each grade at 8% for 11th graders, 2% for 8th graders and less than 1% for 6th graders (Table MD1B). The percentage of students in each grade who reported they had used marijuana in the previous 30 days is lower than the 2018 IYS for all grades (Figure MD1). The percentage of 11th graders who used marijuana in the past 30 days is lower than the previous four IYS data collection years (2012-2018).

The percentage of students who have used any of the other ten drugs asked about on the questionnaire in the past 30 days ranged from less than 1% to 2% for 6th graders, from 1% to 3% for 8th and 11th graders (Table MD2). Across all grades, the highest percentage of reported use for other drugs were from 8th and 11th graders (3%) indicating they used over-the-counter medications differently from the way the directions indicate.

Use of Marijuana and Other Drugs by Sex

Comparable percentages of female and male students reported lifetime (Table MD3A) and current marijuana use (Table MD3A.1). A plurality of students, among those who have ever used marijuana, reported that they first tried marijuana when they were 15 or 16 years old with 42% of females and 37% of males selecting this age category (Table MD3C). The percentage of students who have used any of the other ten drugs asked about on the questionnaire in the past 30 days was 2% or lower for both sexes (Table MD4).

**Question:** In the past 30 days, have you...? **#** = Number of students responding to the item
Use of Marijuana and Other Drugs by Race/Ethnicity

Across all racial and ethnic groups, the percentage of students who reported previously using marijuana ranged from a low of 3% for Asian students to 12% for American Indian or Alaska Native students (Table MD5A). The percentage ranged from 1% to 5% for using marijuana in the past 30 days with the lowest percentage among Asian students and American Indian or Alaska Native students and the highest percentage among students who identify with two or more races at 5% (Table MD5A.1). For most of the racial/ethnic groups, the majority of students who ever tried marijuana indicated they first tried marijuana at 13-14 or 15-16 years of age (Table MD5C). The percentage of students who have used any of the other ten drugs asked about on the questionnaire in the past 30 days ranged from less than 1% to 7%. On the high end, 7% of Native Hawaiian or other Pacific Islander students reported they sniffed glue, breathed the contents of gases or sprays in order to get high and 7% of students from this same group also reported they used over-the-counter medications differently from the way the directions indicate (Table MD6A to MD6J).

Question: In the past 30 days, have you...? Used MDMA (Ecstasy/Molly)
Use of Marijuana and Other Drugs by Sexual Orientation

A higher percentage of students who are lesbian, gay, bisexual, or another non-heterosexual identity (LGB+) reported previous marijuana use (13%) than heterosexual students (6%, Table MD7A). Within the past 30 days, the percentage of marijuana usage was again higher among LGB+ students (7%) compared to 3% for heterosexual students (Table MD7A.1). Among heterosexual students who have tried marijuana, 42% reported they first tried it when they were 15 or 16 years old and another 32% reported they first tried it at the age of 13 or 14. Among LGB+ students, 34% reported they first tried marijuana at age 13 or 14 and another 34% reported they first tried it at age 15 or 16 (Table MD7C). The percentage of students who have used any of the other ten drugs asked about on the questionnaire in the past 30 days ranged from 1% to 2% for heterosexual students and from 1% to 5% for LGB+ students. The substance with the highest percentage of reported use (5% for LGB+ students) was for over-the-counter medications being used differently from directed (Table MD8).

Question: In the past 30 days, have you...? # = Number of students responding to the item
Perceptions of Parents’ Attitudes

All students who participated in the 2021 IYS were asked about their parents’ or guardians’ views on nine different behaviors related to using alcohol, cigarettes, and other substances; attending a party where others are using alcohol or other drugs; or starting a fight. A tenth item on volunteering was included as a data quality check and is not reported in the following tables or accompanying narrative. Specifically, students were asked, “Thinking about your parents’ or guardians’ views, for each of the following, how much would you say they would approve or disapprove of you doing it?” followed by the response options that were a five-point scale from strongly disapprove to strongly approve.

The set of parents’ attitudes questions were immediately preceded by: “The questions in this part of the survey refer to your parents/guardians and others who live with you. Parents/guardians are the adults (age 21 and over) who live with you and are responsible for taking care of you.”

Perceptions of Parents’ Attitudes by Grade

For each grade, a majority of students indicated strong disapproval from their parents for each behavior shown in Table PA1. For eight of the nine behaviors, a higher percentage of 6th graders selected strongly disapprove than 8th and 11th graders. Across all grades, the highest percentage of students indicated their parents would strongly disapprove for using any illegal drug other than alcohol, cigarettes, or marijuana.

</tbody>
</table>

**Note:** SD = Strongly disapprove, D = Somewhat disapprove, N = Neither approve nor disapprove, A = Somewhat approve, SA = Strongly approve; # = Number of students responding to item.
Perceptions of Parents’ Attitudes by Sex

A majority of both male and female students reported their parents would strongly disapprove of each behavior shown in Table PA2. For all of the nine behaviors, a higher percentage of females than males selected strongly disapprove. Across all grades, the highest percentage of students selecting strongly disapprove was for using any illegal drug other than alcohol, cigarettes, or marijuana.

Table PA2: Perceptions of parents' attitudes, by sex

Note: SD = Strongly disapprove, D = Somewhat disapprove, N = Neither approve nor disapprove, A = Somewhat approve, SA = Strongly approve; # = Number of students responding to item
Perceptions of Parents’ Attitudes by Race/Ethnicity

For each behavior, a majority of students indicated strong disapproval from a parent or guardian — though the percentage who selected strongly disapprove varied across the racial/ethnic groups (Tables PA3A to PA3I). As an example, the percentages of students who responded that their parents would strongly disapprove of them drinking beer, wine, alcoholic drinks, or hard liquor ranged from 67% (American Indian or Alaskan Native students) to 76% (Asian students; Table PA3A).

Question: Thinking about your parents’ or guardians’ views, for each of the following, how much would you say they would approve or disapprove of you doing it? - Going to a party where kids were using drugs
Perceptions of Parents’ Attitudes by Sexual Orientation

A higher percentage of heterosexual students reported strong disapproval from a parent or guardian for each of the behaviors listed in Table PA4 compared to students who are lesbian, gay, bisexual, or another non-heterosexual identity (LGB+). For both groups, the percentage who selected strongly disapprove was highest for using any illegal drug other than alcohol, cigarettes, or marijuana at 92% for heterosexuals and 89% for LGB+ students.

Appendix A – Communication with the IYS coordinators

First email

Dear IYS Coordinator’s name:

This email contains important information to help administer the upcoming Iowa Youth Survey (IYS). The IYS administration packet is ready for your use. This packet contains the following documents:

- 2021 IYS administration cover letter:
  - iys-school.online/2021CoverLetter
- Checklist for IYS School Coordinators:
  - iys-school.online/2021Checklist
- Instructions & Script for Classroom teachers:
  - iys-school.online/2021Instructions

Please share this information with your IYS school coordinator(s) and relevant classroom teachers. Administration of the survey will occur from September 27 to November 12, 2021 as decided upon by your district or school.

Your survey link for your district is:

Link to the survey: iys-school.link/1234

The link is unique to your school district and should be used by all participating students.

The hyperlinks for IYS Parental Consent letter in English and Spanish are:

- iys-school.online/2021ParentConsent-English
- iys-school.online/2021ParentConsent-Spanish

If you experience problems with the survey link on administration day, please contact our survey administrator, the Center for Social and Behavioral Research at the University of Northern Iowa, at (319) 273-2105. If you have feedback on the survey administration process or other concerns about the Iowa Youth Survey, please send an email to iowayouthsurvey@idph.iowa.gov.

We thank you for joining over 175 Iowa school districts in administering the IYS to your students this fall.

Pat McGovern          Rhonda Chittenden
IYS Director          Iowa Youth Health Assessment Program Coordinator
**Reminder email**

Dear *IYS Coordinator’s name*:

Since early September, **tens of thousands of Iowa students have completed the 2021 Iowa Youth Survey**. Despite multiple unprecedented challenges facing Iowa schools, nearly 50% of the state’s public school districts and several private school districts have successfully administered the survey thus far. We appreciate your commitment to providing students the opportunity to provide information on their lived experiences related to personal health, school safety and belonging, bullying and more. Participating schools will have data—collected during the ongoing pandemic—to inform policy, curricula and service decisions in their districts.

This fall, your district registered to participate in the 2021 Iowa Youth Survey. **With one week left before the survey closes, we want to ensure that your students have the opportunity to respond.** Please use the enclosed survey link to administer the survey to your district’s 6th, 8th, and 11th graders on or **before November 12**. As a reminder, you should have distributed the parental consent letter to district parents at least two weeks prior to administering the questionnaire.

Your survey link for your district is:

**Link to the survey: iys-school.link/1234**

The link is unique to your school district and should be used by all participating students.

If you experience problems with the survey link on administration day, please contact our survey administrator, the Center for Social and Behavioral Research at the University of Northern Iowa, at (319) 273-2105. If you have feedback on the survey administration process or other concerns about the Iowa Youth Survey, please send an email to [iowayouthsurvey@idph.iowa.gov](mailto:iowayouthsurvey@idph.iowa.gov).

Thank you for supporting the 2021 Iowa Youth Survey.

---

Pat McGovern
IYS Coordinator

Rhonda Chittenden
Iowa Youth Health Assessment Program Coordinator
Appendix B – 2021 IYS Questionnaire

Welcome to the 2021 Iowa Youth Survey! The Iowa Youth Survey is administered and sponsored by the Iowa Department of Public Health. The Iowa Youth Survey instrument was originally developed by the University of Iowa and survey instruments from 1996 – 2018 may not be copied or duplicated in whole or in part by any means without express written permission from the University of Iowa. Questions about the copyright may be directed to the Iowa Department of Public Health at iowayouthsurvey@idph.iowa.org.

You can complete the survey in either English or Spanish. Use the dropdown menu in the upper right to switch languages.

INSTRUCTIONS:

For each question, please select the one response that comes closest to your honest answer. If you do not understand a question, please leave it blank. If you cannot answer truthfully or do not want to answer any question, please leave it blank.

Your teacher will not be able to answer questions about the survey once it has started.

The survey will not ask your name, birthday, address or student identification number. Your answers will be anonymous and private. Special care will be taken to make sure your answers cannot be traced to you.

No information will ever be made public which could connect your answers to you. When the survey results are shared in public reports, your answers will be grouped with the answers of other Iowa students who took this survey. If survey results are shared with researchers or others for special studies, your privacy will be protected.

Please respond honestly. Your honest responses will help us understand the health behaviors of Iowa students and develop and improve programs to help young people like you and your classmates.

Thank you for completing this survey.

GENERAL INFORMATION

County name, school district number, and the building name are required for each survey.

Q1. Please enter the name of the county where you live:
Q2. Please enter your School District Number (4-digit number provided by your teacher):
Q3. Please enter your school name:

The first few questions are about you. They will help us match later questions based on your age, gender, etc.
Q4. What is your current grade in school?
   - 6th
   - 8th
   - 11th

Q5. Which of the following best describes you?
   - Female
   - Male

Q6. Which of the following best describes you?
   - Straight (or heterosexual)
   - Gay or lesbian
   - Bisexual
   - Another identity
   - Not sure

Q7. Are you Hispanic or Latino?
   - Yes
   - No

Q8. What is your racial identity? *Check all that apply*?
   - White
   - Black or African American
   - American Indian or Alaska Native
   - Asian
   - Native Hawaiian or Other Pacific Islander
   - Other race(s) Please specify: ____________________________

Q9. Do you have a parent/guardian currently in the military?
   - Yes
   - No [SKIP TO Q10]

Q9a. [IF Q9=YES] Thinking about your parent/guardian in the military, during the past 12 months, were they away for more than two weeks for training or deployment?
   - Yes
   - No

Q10. How many languages are spoken in your home?
   - 1 language
   - 2 languages
   - 3 or more languages
Q11. Have you ever been separated from a parent or guardian because they went to jail, prison, or a detention center?
   o Yes
   o No

This section asks you to describe your experiences. Please read each question carefully and pay attention to the time periods listed.

Q12. During the current school year, have you…? [Yes / No response for each]
   a. Worked in a paid job
   b. Volunteered to improve your community (either with an organization or on your own)
   c. Participated in extra-curricular activities at school or outside of school (sports, music, clubs, 4-H, scouts, etc.)
   d. Attended religious services, programs, or activities

Q13. On an average school day, about how many hours of screen time do you spend for something that is not school work? By screen time we mean time spent watching shows or videos, using a computer/tablet, playing video games, social media, apps, or using a phone for something other than calling or texting.
   o 0 hours
   o More than 0 but less than 2 hours
   o At least 2 hours but less than 4 hours
   o At least 4 hours but less than 6 hours
   o At least 6 hours but less than 8 hours
   o At least 8 hours but less than 10 hours
   o At least 10 or more hours

Q14. On how many of the past 7 days were you physically active for a total of 60 minutes (1 hour) or more per day? Add up all the time you spent in any kind of moderate or intense physical activity like running, walking fast, swimming, riding a bicycle, etc.
   o 0 days
   o 1 day
   o 2 days
   o 3 days
   o 4 days
   o 5 days
   o 6 days
   o 7 days
The next 2 questions ask about food you ate or drank in the past 7 days. Think about all the meals and snacks you had from the time you got up until you went to bed. Be sure to include food you ate at home, at school, at restaurants, or anywhere else.

Q15. In the past 7 days, about how many times each day did you eat fruit (do not count fruit juice)?
   o I did not eat any fruit during the past 7 days
   o Less than 1 time each day
   o 1 time per day
   o 2 times per day
   o 3 times per day
   o 4 times per day
   o 5 or more times per day

Q16. In the past 7 days, about how many times each day did you eat green salad, carrots, potatoes or any other vegetables (do not count french fries, fried potatoes, or potato chips)?
   o I did not eat any vegetables during the past 7 days
   o Less than 1 time per day
   o 1 time per day
   o 2 times per day
   o 3 times per day
   o 4 times per day
   o 5 or more times per day

Q17. In the past 30 days, did you ever go hungry because there was not enough food in your home?
   o Yes
   o No

Q18. Do you have any ongoing physical, mental, or emotional disabilities or impairments that limit your daily activities?
   o Yes
   o No

The next questions ask about concussions. A concussion is when a blow or jolt to the head causes problems such as headaches, dizziness, being dazed or confused, difficulty remembering or concentrating, vomiting, blurred vision, or being knocked out.

Q19. In the past 12 months, have you had a concussion from playing a sport or being physically active?
   o Yes
   o No [SKIP TO Q20]
   o Not sure [SKIP TO Q20]

Q19a. [IF Q19=YES] How many times did you have a concussion in the past 12 months?
   o 1 time
   o 2 times
   o 3 times
   o 4 or more times
“Homeless” means that you had no regular or adequate place to live. This includes living in a car, or on the street, or staying in a homeless shelter or other temporary shelter.

Q20. Have you ever been homeless?
   o Yes
   o No [SKIP TO Q21]

Q20a. [IF Q20=YES] Were you homeless at any time in the past 12 months?
   o Yes
   o No

****************** GAMBLING QUESTIONS ******************

Q21. Have you ever…? [Yes / No response for each]
   a. Bet or wagered on sporting events (football, baseball, hockey, soccer, e-sports, etc.)
   b. Bet or wagered on an internet fantasy sports contest (including season-long and daily fantasy sports)
   c. Bet or wagered on card or dice games with friends or family (including poker)
   d. Spent money on in-game or in-app purchases to extend play (online/internet, apps, video gaming, loot boxes, etc.)
   e. Bet or wagered on games of skill such as pool, bowling, or dominoes
   f. Purchased lottery scratch off tickets or lotto numbers

Q22. [IF Q21 items=YES] During the past 30 days, have you…? [Yes / No response for each]
   a. Bet or wagered on sporting events (football, baseball, hockey, soccer, e-sports, etc.)
   b. Bet or wagered on an internet fantasy sports contest (including season-long and daily fantasy sports)
   c. Bet or wagered on card or dice games with friends or family (including poker)
   d. Spent money on in-game or in-app purchases to extend play (online/internet, apps, video gaming, loot boxes, etc)
   e. Bet or wagered on games of skill such as pool, bowling, or dominoes
   f. Purchased lottery scratch off tickets or lotto numbers

****************** MENTAL HEALTH QUESTIONS ******************

The next questions ask about mental health. Mental health is your emotional, psychological and social well-being.

Q23. In the past 12 months, did you ever feel so sad or hopeless almost every day for 2 weeks or more in a row that you stopped doing some usual activities?
   o Yes
   o No

Q24. In the past 12 months, have you thought about killing yourself?
   o Yes
   o No [SKIP TO Q28]
Q25. [IF YES to Q24] In the past 12 months, have you made a plan about how you would kill yourself?
   ○ Yes
   ○ No

Q26. [IF YES TO Q24] In the past 12 months, have you tried to kill yourself?
   ○ Yes
   ○ No

Q27. [IF YES to Q26] If you attempted to kill yourself in the past 12 months, did any attempt result in an injury, poisoning, or overdose that had to be treated by a doctor or nurse?
   ○ Yes
   ○ No

****************************************************************************** BELIEFS & ATTITUDES ******************************************************************************

This section of the survey asks you to describe your beliefs and attitudes. Please respond honestly about your beliefs and attitudes, not what you “think” is an acceptable answer to others.

Q28. For each of the following, please indicate how much you agree or disagree with each statement
   Strongly Disagree  Disagree  Neither Agree nor Disagree  Agree  Strongly Agree
   a. It is important to help others
   b. I care about other peoples’ feelings
   c. I feel sorry for people who have things stolen or damaged
   d. I am accepting of those different than myself
   e. It is wrong to discriminate against someone because of their race, appearance, culture, religion, etc.
   f. I can say “no” when someone wants me to do things I know are wrong or dangerous
   g. I feel I have much to be proud of
   h. Violence is an acceptable way to solve problems

Q29. Thinking about possible risks to physical or mental health, please indicate the level of risk for each of the following activities
   Little or no risk  Slight risk  Moderate risk  High risk
   a. Drinking 4 [FEMALE] / 5 [MALE] or more drinks of alcohol (beer, wine, alcoholic drinks, or hard liquor such as vodka, whiskey, rum, tequila, gin) within a couple of hours
   b. Smoking cigarettes regularly
   c. Using marijuana regularly
   d. Gambling regularly
   e. Using methamphetamines (crank) regularly
   f. Using cocaine regularly
   g. Using amphetamines other than methamphetamines (like stimulants, uppers, speed) regularly
   h. Using any other illegal drug regularly
   i. Regularly using over-the-counter medications differently than directed
   j. Regularly using prescription medication for non-medical reasons
k. Regularly use e-cigarettes (vape-pens, JUUL, hookah-pens, e-hookahs, e-cigarettes, e-pipes, personal vaporizers or mods)

************************************************************************************ PEER QUESTIONS *************************************************************************************

The questions in this section of the survey refer to the students in your school. When you read and answer these questions keep in mind the attitudes and beliefs of other students.

Q30. About how many students in your grade would feel it is okay for you to do each of the following?

Almost none would think it is ok
A few would think it is ok
Some would and some wouldn’t think it is ok
Most would think it is ok
Almost all would think it is ok

a. Drink beer, wine, alcoholic drinks, or hard liquor (for example: vodka, whisky, rum, tequila, gin)
b. Smoke cigarettes
c. Use an e-cigarette, JUUL, vape-pen, e-hookah, mod-box, or other electronic cigarette
d. Use marijuana
e. Use any illegal drug other than alcohol, cigarettes, or marijuana
f. Go to a party where kids under 21 were drinking alcohol
g. Go to a party where kids were using drugs
h. Use prescription drugs for non-medical reasons

************************************************************************************ SCHOOL QUESTIONS *************************************************************************************

The questions in this section refer to the school where you currently spend the most time. The questions focus on the other students, teachers, administrators, or other things connected to the school.

Q31. For each of the following, please indicate how much you agree or disagree with each statement

Strongly Disagree  Disagree  Neither Agree nor Disagree  Agree  Strongly Agree

a. I feel safe at school
b. I care about my school
c. I try to do my best in school
d. I do not plan to finish high school
e. My school lets my parent/guardian know if I’m doing a good job
f. My school lets my parent/guardian know if I’ve done something wrong
g. There is at least one adult at school that I could go to for help with a problem
h. Students try to make new students feel welcome in the school
i. My school has up-to-date computers and other electronic equipment available to students
j. We have space and facilities for extra-curricular activities at my school
k. My school building is well maintained
Q32. In the past 12 months, have you done any of the following on school property or at a school event? [Yes / No response for each]
   a. Carried a gun, knife, club, or other weapon that is not used for a school activity like archery, kendo, skeet shooting, etc.
   b. Used alcohol or other illegal drugs
   c. Used cigarettes, smokeless tobacco (chewing tobacco, snuff, plug, dipping tobacco, snus), or e-cigarettes (vape-pens, hookah-pens, e-hookahs, e-cigars, e-pipes, personal vaporizers or mods)
   d. Had your belongings (clothing, books, bike, car) stolen or deliberately damaged
   e. Been disciplined for fighting, theft, or damaging property
   f. Been threatened or injured by someone with a weapon (like a gun, knife or club)

Q33. In the past 12 months, have you …? [Yes / No response for each]
   a. Damaged property on purpose (like breaking windows, scratching a car, etc.)
   b. Hit, kicked, or fought someone because they made you angry
   c. Helped a friend or classmate with a problem they were having
   d. Used a weapon, force, or threats to get money or things from someone
   e. Verbally threatened to physically harm someone
   f. Stolen something

Q34. [If Yes to Q33b] What is your relationship with the person or persons you hit, kicked, or fought in the past 12 months?
   o Sibling(s) only
   o Sibling(s) and another person or persons (e.g. friends, classmates, peers)
   o Another person or persons (e.g. friends, classmates, peers)

The following questions are about bullying. Bullying is unwanted, aggressive behavior among school-aged children that involves a real or perceived power imbalance (such as the use of physical strength, access to embarrassing information, or popularity to control or harm others). Bullying can occur in person or through technology.

Q35. In the past 30 days, how often have the following occurred, if at all?

   Has not occurred    Happened once      2-4 times    5-10 times    More than 10 times
   a. I was called names, was made fun of, or teased in a hurtful way
   b. Other students left me out of things on purpose, excluded me from their group of friends, or completely ignored me
   c. I was hit, kicked, pushed, or shoved in a way meant to harm me
   d. Other students told lies, spread false rumors about me, and tried to make others dislike me
   e. Other students made hurtful sexual jokes, comments, or gestures
   f. I have received a threatening or hurtful message from another student in an email, on a website, on a cell phone, from text messaging, in an internet chat room, or on social media
   g. Something hurtful has been shared about me on social media (Facebook, Twitter, Snapchat, TikTok, Instagram, etc.)
Q36. [IF ANY Q35=YES, ASK FOR EACH] What, if anything, do you think may have made you a target of this behavior? Check all that apply.
   o My race, country of origin, or ethnicity
   o My culture
   o My religion
   o My sexual orientation
   o My gender
   o Another reason
   o Don’t know/Not sure

Q37. In the past 30 days, how many times, if ever, have you done any of the following to someone else at school?
   Has not occurred  Happened once  2-4 times  5-10 times  More than 10 times
   a. I called someone names or made fun of them or teased them in a hurtful way
   b. I left another student or students out of things on purpose, excluded them from my group of friends, or ignored them
   c. I hit, kicked, pushed, or shoved someone
   d. I told lies, spread false rumors about another student
   e. I made sexual jokes, comments, or gestures
   f. I sent a threatening or hurtful message in an email, a text message, or a direct message (DM)
   g. I shared potentially damaging info about someone else on social media (Facebook, Twitter, Snapchat, TikTok, Instagram, etc.)

Q38. How often, if ever, do school staff attempt to stop bullying when they know about it?
   o Almost never
   o Once in a while
   o Sometimes
   o Often
   o Almost always

Q39. In the past 30 days, did you ever stay home because you felt unsafe going to school or being at school?
   o Yes
   o No

Q40. Please indicate how much you agree or disagree with each of the following statements
   Strongly Disagree  Disagree  Neither  Agree nor Disagree  Agree  Strongly Agree
   a. Students in this school respect other people regardless of gender
   b. Students in this school respect other people regardless of their race/ethnicity/skin color
   c. Students in this school respect other people regardless of their cultural/religious differences
   d. Students in this school respect other people regardless of their physical disabilities
   e. Students in this school respect other people regardless of their learning disabilities
   f. Students in this school respect other people regardless of their sexual orientation
Q41. For each of the following, please indicate how much you agree or disagree with each statement

Strongly Disagree  Disagree  Neither  Agree nor Disagree  Agree  Strongly Agree

a. My teachers care about me
b. My teachers are available to talk with students one-on-one
c. My teachers notice when I am doing a good job and let me know about it

Q42. For each of the following, please indicate how much you agree or disagree with each statement

Strongly Disagree  Disagree  Neither  Agree nor Disagree  Agree  Strongly Agree

a. Staff in this school respect gender differences
b. Staff in this school respect racial/ethnic/skin color differences
c. Staff in this school respect cultural/religious differences
d. Staff in this school respect all sexual orientations
e. Staff in this school respect students with learning disabilities
f. Staff in this school respect students with physical disabilities

Q43. How easy or hard do you think it would be for someone your age to get each of the following:

Very Hard  Hard  Easy  Very Easy  Don’t Know/Not sure

a. Cigarettes
b. E-cigarettes, JUUL, vape-pen, e-hookah, mod-box, or other electronic cigarettes
c. Alcoholic beverages (beer, wine, or liquor)
d. Marijuana (pot, weed, bud, hash)
e. Any other illegal drug (methamphetamine, heroin, cocaine, etc.)
f. A firearm (handgun, shotgun, rifle, etc.)
g. Prescription medication that is not prescribed for you by a doctor or nurse
h. Lottery or scratch tickets

Q44. Have you ever had a drink (more than a few sips) of alcohol (beer, wine, alcoholic drinks, or hard liquor such as vodka, whiskey, rum, tequila, gin)?

   o Yes
   o No [SKIP TO Q48]

Q44a. [IF Q44=YES] How old were you when you first drank (more than a few sips of) alcohol (beer, wine, alcoholic drinks, or hard liquor such as vodka, whiskey, rum, tequila, gin)?

   o 8 or younger
   o 9 or 10
   o 11 or 12
   o 13 or 14
   o 15 or 16
   o 17 or older
Q45. [IF Q44=YES] In the past 30 days, have you had at least one drink of alcohol (glass, bottle or can of beer, glass of wine, liquor, or mixed drink)?
   o Yes
   o No [SKIP TO Q48]

Q45a. [IF Q45=YES] When you drank in the past 30 days, did you drink…?
   i. Beer             Yes    No
   ii. Any other alcohol Yes    No

Q46. In the past 30 days, have you had 4 [FEMALE] 5 [MALE] or more drinks of alcohol in a row within a couple of hours?
   o Yes
   o No

Q47. [IF Q45=YES] In the past 30 days, did you get alcohol in the following ways?
   [Yes / No response for each]
   a. I bought it
   b. I gave someone money to buy it
   c. A parent/guardian gave it to me
   d. I took it from my parent/guardian’s cabinet/refrigerator
   e. I got it at a party
   f. A friend who is under 21 gave to me
   g. A friend who is 21 or over gave it to me

Q48. Have you ever driven a car or other motorized vehicle (ATV, tractor, moped) after using any amount of alcohol, recreational or non-prescribed drugs?
   o Yes
   o No

TOBACCO QUESTIONS

Q49. Have you ever smoked tobacco or used any tobacco products (not including e-cigarettes)?
   o Yes
   o No

Q50. Have you ever used an e-cigarette, JUUL, vape-pen, e-hookah, mod-box, or other electronic cigarette?
   o Yes
   o No
Q51. Have you ever used a heated (heat-not-burn) tobacco product, heat tobacco stick or capsule to produce a vapor (iQOS, HeatSticks, glo, Eclipse, lil)? *These are different from e-cigarettes which heat a liquid to produce a vapor.*
- Yes
- No

Q52. [IF Q49 or Q50 or Q51=YES] In the past 30 days, have you: [Yes / No response for each]
   a. Smoked cigarettes
   b. Smoked menthol cigarettes (menthol cigarettes taste like mint)
   c. Smoked cigars
   d. Used smokeless tobacco (chewing tobacco, snuff, plug, dipping tobacco, snus)
   e. Smoked tobacco using a water pipe or hookah
   f. Used an e-cigarette, JUUL, vape-pen, e-hookah, mod-box, or other electronic cigarette
   g. Used a heated (heat-not-burn) tobacco product, heat tobacco sticks or capsules

Q53. [If Q52a or Q52b=YES] In the past 30 days, on the days you smoked, on average, about how many cigarettes did you smoke per day?
- Less than 1 cigarette per day
- 1 cigarette per day
- 2 to 5 cigarettes per day
- 6 to 10 cigarettes per day
- 11 to 20 cigarettes per day
- More than 20 cigarettes per day

Q54. [IF YES TO Q49] In the past 12 months, have you stopped smoking cigarettes for one day or longer because you were trying to quit?
- Yes
- No

Q55. [IF YES TO Q50] In the past 12 months have you stopped using e-cigarettes, JUUL, vape-pen, e-hookah, mod-box, or other electronic cigarette for one day or longer because you were trying to quit?
- Yes
- No
Q56. [IF YES TO Q49 or Q50 or Q51] How old were you when you first…?
   Never   8 or younger  9 or 10  11 or 12  13 or 14  15 or 16  17 or older
   a. Smoked a whole cigarette
   b. Used smokeless tobacco (chewing tobacco, snuff, plug, dipping tobacco, snus)
   c. Used an e-cigarette, JUUL, vape-pen, e-hookah, mod-box, or other electronic cigarette
   d. Used heated (heat-not-burn) tobacco products, heat tobacco sticks or capsules
   e. Smoked menthol cigarettes (menthol cigarettes taste like mint)

************************************************* MARIJUANA and OTHER QUESTIONS *************************************************

Q57. Have you ever used marijuana (pot, grass, hash, bud, weed)?
   o  Yes
   o  No [SKIP TO Q58]

Q57a. [IF YES TO Q57] In the past 30 days, have you used marijuana (pot, grass, hash, bud, weed)?
   o  Yes
   o  No

Q57b. [IF YES TO Q57] How old were you when you first tried marijuana (pot, grass, hash, bud, weed)?
   o  8 or younger
   o  9 or 10
   o  11 or 12
   o  13 or 14
   o  15 or 16
   o  17 or older

Q58. In the past 30 days, have you…? [Yes / No response for each]
   a. Sniffed glue, breathed the contents of gases or sprays in order to get high
   b. Used over-the-counter medications differently from the way the directions indicate
   c. Used prescription medications that were not prescribed for you by your doctor
   d. Used steroid pills or shots without a doctor’s prescription
   e. Used cocaine (blow, crack, rock, coke [not Coca Cola])
   f. Used methamphetamine (crank)
   g. Used amphetamines other than methamphetamines (like stimulants, uppers, speed)
   h. Used an opioid (heroin) or a prescription opioid (oxycodone, hydrocodone, Oxycontin, codeine, etc.) for non-medical reasons
   i. Used mushrooms (shrooms, psilocybin)
   j. Used MDMA (Ecstasy/Molly)
FAMILY QUESTIONS

The questions in this part of the survey refer to your parents/guardians and others who live with you. Parents/guardians are the adults (age 21 and over) who live with you and are responsible for taking care of you.

Q59. Thinking about your parents’ or guardians’ views, for each of the following, how much would you say they would approve or disapprove of you doing it?

<table>
<thead>
<tr>
<th>Strongly Disapprove</th>
<th>Somewhat Disapprove</th>
<th>Neither approve nor disapprove</th>
<th>Somewhat Approve</th>
<th>Strongly Approve</th>
</tr>
</thead>
</table>

a. Drinking beer, wine, alcoholic drinks, or hard liquor (for example vodka, whiskey, rum, tequila, gin) without their permission
b. Smoking cigarettes
c. Using an e-cigarette, JUUL, vape-pen, e-hookah, mod-box, or other electronic cigarette
d. Using marijuana
e. Volunteering to help clean up the banks of a nearby creek or stream
f. Using any illegal drug other than alcohol, cigarettes, or marijuana
g. Misusing prescription drugs, whether they are yours or someone else’s
h. Starting a physical fight with someone
i. Going to a party where kids under 21 were using alcohol
j. Going to a party where kids were using drugs

You have completed the survey.

You will now be redirected to the Your Life Iowa website, a resource that may be useful to you. Thank you.
