

# FY20 WISEWOMAN Program Updates Webinar September 23, 2019

---

IOWA DEPARTMENT OF PUBLIC HEALTH  
*Protecting and Improving the Health of Iowans*

# Follow-up Screening Visit

- CDC Required Change
- Takes the place of the BP+ Screening Visit
- Conducted on participants who finish health coaching and/or any healthy behavior support services
- 4-6 weeks after the completion of health coaching/healthy behavior support services
- The follow-up screening visit must be three months after the initial office visit
- Includes height, weight, and blood pressure
- Participants who had an elevated glucose and/or cholesterol at the initial screening visit, may have another glucose or cholesterol test, if the provider deems necessary
- Entered on the CVD Evaluation Form
- Protocols for health coaching and all the HBSS are available. They will be posted on the coordinators portal.

# Follow-up Screening Visit Continued

---

- Health coaching complete now means three sessions (not just two with a withdrawn)
- The 2<sup>nd</sup> Health Risk Assessment needs to be done at the same time as the Follow-up Screening Visit. That timeframe is 4-6 weeks after the completion of health coaching/healthy behavior support services.

# Rescreening in FY20

- In order to have complete data for the CDC, participants who completed health coaching/healthy behavior support services in FY19 will need to be rescreened in FY20, as much as possible.
- The University of Iowa can run reports for each program, to more easily identify women who need to be rescreened.

# Questions?
