Mr. Bauerkemper was the first director of problem gambling (1992 to 1996) for the state of Nebraska where he created the Gamblers Assistance program and pioneered the treatment of gambling counseling in Nebraska. In addition he was appointed and served on the Nebraska’s Commission on Problem Gambling. He served on the Board of Directors for the National Council on Problem Gambling from 2001-2008 and from 2012 to 2016 He recently served on the National Councils’ Legislative committee where he helps raise awareness of problem gambling in Washington DC. Mr. Bauerkemper has been providing counseling to gambling families since 1986. He has published research on the prevalence of problem gambling in the Nebraska Probation Department. He received the “First Step” award in 1999 and the Wisconsin Leadership award in 2016 for his work with problem gamblers. Mr. Bauerkemper is an internationally recognized expert on problem gambling and has provided training throughout the United States and Southeast Asia.

Jerry Bauerkemper
Executive Director
Nebraska Council on Problem Gambling

Exnccgjb@aol.com
• There are 18 states with commercial gaming (including Iowa), 29 with Indian casinos, 44 have lotteries, 22 have horse racing and nationwide there are nearly a million slot machines.

• In total over a $100 billion dollars in gaming revenue is generated nationally; it is staggering. Slot machines create more behavior problems than any other form of gambling and not all slot machines are safely locked up in casinos or located at racetracks. Six states have let them move into residential areas.
• The riverboats were originally required to sail, had limited hours of operation and a limit on all wagers. The requirements were intended to protect vulnerable, at risk people from easy access to casinos and gambling. To play blackjack or slot machines, a customer had to pay to board the boat and could only remain in the casino during the “cruise.” In some cases there was a limit on how much an individual gambler could lose on a single cruise.

• An Analysis of Gaming News and Trends by Ken Adams First Quarter 2019
In the last twenty years, that public policy was mostly lost in the rush to use gambling as a way to solve governmental budget problems. Nothing illustrates the change in public policy more than allowing VLTs in retail and social settings. It was no longer necessary to travel more than a mile or two to find a slot machine. Access to gambling has been made simple and easy. It is the very definition of convenience gambling.

Gambling Convenience

An Analysis of Gaming News and Trends by Ken Adams

First Quarter 2019
Examples of Gambling

- Bingo
- Card & Domino Games when played for $$$
- Games of skill (e.g. pool, darts, shuffleboard, golf) for consideration
- Sports betting
- Lottery tickets
- Games found in a casino (slots, cards, dice)
- Horse racing / Dog racing
- Lottery video terminals (VLT)
- On-line poker, gin-rummy, etc.
- Scratch tickets
- Cock fighting / Dog Fighting
- Stock / Commodity Market
- Social Gaming
- Fantasy Sports Leagues
- Daily Fantasy Sports
- E-Sports
AUSTRALIA -- People with gambling problems are unlikely to identify as having a problem or to seek help unless they have experienced serious impacts or harms.

“In addition, our study determined that nearly a quarter of people reporting problem gambling symptoms identified as having problems, but had never accessed help,” she said. “This demonstrates that we need to better understand the experiences and views of people developing gambling problems to ensure that early intervention strategies are attractive and appropriate.

“We also found that people were more likely to seek help for the consequences of their gambling, like relationship issues, money problems or co-occurring problems such as substance abuse, before seeking help for their gambling problems.”
- Gambling occurs on a continuum –
- It is not static

Gambling Behavior

Experimentation Social At-Risk Problem Disordered

Level 1

Level 2

Level 3
Types of problem gamblers

• Action/Skill
  • Stereotypical gambler
  • Likely to be male
  • Earlier onset / late treatment seeking

• Escape / Luck
  • Increasing numbers
  • Prefer machines, games of chance
  • More females
  • Late onset / early treatment seeking
Profile of an Escape Gambler

- Predominantly female
- Noncompetitive gambling
- Shorter gambling career
- Late onset
- Relationship problems
- Emotional gambling
- Lower debts
- Emotion is a relapse issue
- Bottom looks relatively mild
Profile of an Action Gambler

- Predominantly male
- Competitive Gambling
- Start gambling young
- Stereotypical gambler (most movies)
- Has gambling “friends”
- Grandiose, big shot, big tipper
- Criminal activity, arrest record
- Narcissistic personality
- Money is relapse issue
- Become escape gamblers later in life
Similarities and differences with substance abuse

**Similarities**
- Progressive
- Denial
- Mood/affect instability
- Used to escape
- Preoccupation
- LSE / high ego
- Immediate gratification

**Differences**
- More hidden
- No overdose potential
- Financial issues
- Behavior may solve presenting problems
- Few resources for help
- No “test” for gambling
Common characteristics of gamblers and substance abusers:

- Extensive use of lingo
- Relapse history
- Severe financial problems
- LYING
- Erratic spending
- Family/client will ask for help
- Continued disruption after abstinence
• PGs wagered more and were more likely to experience bankruptcies they also made more errors than controls

• PGs and ADs indicated greater impulsivity.

• ADs demonstrated working memory deficits compared to controls and PGs and took longer than controls and PGs to make decisions.

Note: PGs = Problem gamblers; ADs = Alcohol dependent individuals; HCs = Healthy controls.

• Similarities in decision-making deficits between people with problem gambling and people with alcohol dependence (Lawrence, Luty, Bogdan, Sahakian, & Clark, 2009).

• WAGER 15(8) – And the List Goes On
Figure 7-1 A chart of compulsive gambling and recovery. (Robert L. Custer, M.D.,...
A Chart on the Effects of Compulsive Gambling on the Spouse

- Critical Phase:
  - Helplessness
  - Hopelessness
  - Mental Breakdown
  - Substance Abuse
  - Divorce
  - Suicidal Thoughts & Attempts

- Restricting Phase:
  - Blaming
  - Denial
  - Self-esteem
  - Family conflict

- Growth Phase:
  - Sense of achievement
  - Sacrificing for others
  - More affectionate and trusting

- Occasional Worsens
- Keeps concerns to self
- Concerns gambling temporary
- Questions unpaid bills
- Unexplained financial crisis
- Spouse spends less time with family
- Spouse feels rejected
- Attempts to control gambling
- Avoids children family and friends

- Intense resentment
- Thinking impaired
- Immobilization
- Doubt sanity

- Confusion
- Physical Symptoms
- Rage
- Anxiety - panic
- Detached

- Accepts compulsive gambling as illness
- Accepts friends again
- Honest desire for help

- Makes excuses for gambling
- Accepts increased gambling
- Easily reassured
- Accepts remorse of gambler
- Arguments
- Demands upon gambler
- Provides bailouts
- Isolation

- Communications improved
- Problem solving
- Increased self-esteem
- Deal with resentments
- Self-confidence

- Relaxed
- Satisfied
- More own needs
- Meets own needs
- Understanding others

- Anxieties
- Boredom
- Insomnia
- Guilt diminishes

- More receptive
- Accepts giving bailouts
- Honest desire for help

Effects on Spouse of Gambler

Compulsive Gambling & Related Addictions
Training, Consultation, Evaluations, & Treatment Services
p: 1086, All Rights Reserved
Phase I - Winning

- Gambling begins as a social activity. It seems fun, normal. During this phase, people:
  - Sometimes win large amounts of money;
  - Feel invincible, so they bet bigger amounts; because they believe they will win even more;
  - Bet even more to maintain the excitement level.
- But gambling isn't always about money. Problem gamblers like the excitement of gambling, the dream of winning big, or the escape from everyday problems or stresses.
Phase II - Losing

- This is where the real trouble begins. Gamblers feel like their activity is under control; in reality it is not. During this phase, people:
  - seek more action;
  - believe they can quit whenever they want to -- but see no need to quit;
  - gamble to win back what they've lost;
  - gamble and then lie about it;
  - hide their losses;
  - take out loans so they can continue;
  - break their promises to quit;
  - borrow from family and friends;
  - have relationships that begin to suffer.
Phase III - Desperation

- Problem gamblers go through this stage just before they hit rock bottom. During this phase, people:
  - feel desperation and hopelessness as losses continue to mount;
  - cling to their fantasy of winning -- hoping to make everything well again;
  - finally realize that they can't win, but they keep gambling anyway;
  - have little concern for the people around them;
  - steal, write bad checks, or commit illegal activities to finance their gambling.
- Some problem gamblers attempt suicide before they seek treatment.
1. What to look for
2. What to guard against
3. What is important
1. Look for a pattern of gambling that is causing them internal and external strife
2. Guard against triggering the gamblers to gamble by asking about wins and losses
3. Important to access the level of change and the amount of support gambler has to make a change
1. Are you preoccupied with gambling (e.g. preoccupied with relieving past gambling experiences, handicapping, or planning the next venture, or thinking of ways to get money with which to gamble?

2. Do you need to gamble with increasing amounts of money in order to achieve the desired excitement?

3. **Have you made repeated unsuccessful efforts to control, cut back, or stop gambling?**

4. Are you restless or irritable when attempting to cut down or stop gambling?

5. **Do you gamble as a way of escaping from problems or of relieving feelings of helplessness, guilt, anxiety, or depression?**
6. After losing money gambling, do you often return another day to get even?

7. Do you lie to family members, therapists, or to others to conceal the extent of involvement with gambling?

8. Have you jeopardized or lost a significant relationship, job or education or career opportunity because of gambling?

9. Do you rely on others to provide money to relieve a desperate financial situation caused by gambling?

Mild: 4-5 criteria met

Moderate: 6-7 criteria met

Severe: 8-9 criteria met

Applying the ASAM Criteria to Gambling Disorders

- ASAM Criteria Dimension 1: Acute Intoxication and/or Withdrawal Potential

- Sample Questions:
  - Are there current signs of withdrawal (restlessness or irritability when attempting to cut down or stop gambling)?
  - Does the patient have supports in the community to enable him/her to safely tolerate the restlessness or irritability when attempting to cut down or stop gambling?
  - What forms of gambling has the individual engaged in?
  - Has the patient also been using psychoactive substances to the point where alcohol or other drug withdrawal management is necessary?
Sample Questions:

- Are there current physical illnesses, other than withdrawal, that need to be addressed or which complicate treatment?

- Does the individual manifest any acute conditions associated with prolonged periods of gambling (e.g., urinary tract infection)?

- Is there a need for medical services which might interfere with treatment (e.g., chemotherapy or kidney dialysis)?

- Are there chronic medical conditions such as hypertension, peptic ulcer disease, or migraines that might be exacerbated by either cessation or continuation of the gambling behavior?

- Are there chronic conditions that might interfere with treatment (e.g., chronic pain)?
Sample Questions:

- Are there other current psychiatric illnesses or psychological, behavioral, or emotional problems or a substance use disorder that need to be addressed or which complicate treatment?

- Are there chronic conditions that affect treatment?

- Do any emotional/behavioral problems appear to be an expected part of the gambling disorder, or do they appear to be separate?

- Even if connected to the gambling, are they severe enough to warrant specific mental health treatment?

- Is the patient suicidal, and if so, what is the lethality?

- If the patient has been prescribed psychiatric medications, is he/she adherent?

- Does the individual have distortions in thinking such as superstitions, overconfidence or an inflated sense of power and control?
Sample Questions:

- Does the patient feel coerced into treatment or actively object to receiving treatment?

- How ready is the patient to change (stage of “readiness to change”)?

- If willing to accept treatment, how strongly does the patient disagree with others’ perception that s/he has a gambling problem?

- Is the patient adherent to avoid a negative consequence (externally motivated) or internally distressed in a self-motivated way about his/her gambling problem?

- Is there leverage available?
Sample Questions:

- Are there barriers to access to treatment, such as transportation or child care responsibilities?
- Are there legal, vocational, social service agency, or criminal justice mandates that may enhance motivation for engagement into treatment?
- Is the patient able to see value in recovery?
- Are there any dangerous family, significant others, living, school, or work situations threatening treatment engagement and success?
- Does the patient have supportive friendship, financial, or educational/vocational resources to improve the likelihood of successful treatment?
- Are the patient's financial circumstances due to the gambling or associated legal problems an obstacle to receiving or distraction from treatment, or a threat to personal safety (e.g., loan sharks)?
- ASAM information available on IDPH website
• In the problem gambling treatment population, 70 percent of participants reported using illicit drugs and 24 percent reported drugs had been a problem at least once in their life (Toneatto, 2002).

• Iowa (Shaffer et al., 2002) found 23% of gamblers had been treated for substance abuse.

• A review of 520 problem gamblers receiving gambling treatment in Nebraska revealed that 45% had received mental health or substance abuse services in the six months prior to gambling treatment, and 43% of those were receiving outpatient substance abuse treatment (Christensen, 2001).
• The study, published in the *Journal of Gambling Studies*, is from the Research Institute on Addictions at the University at Buffalo, N.Y. (Welte, Barnes, Tidwell, & Hoffman, 2010).

• The researchers state that “after age 21 problem gambling is considerably more common than alcohol dependence” (Welte et al., 2010, p. 57).

• The confusion comes from comparing this broadest definition of disordered gambling with a narrow definition of alcohol disorders.
• Alcoholism – 30% of gamblers were also alcoholics.
• Depression – major, dysthymic.

• Suicidal – National Gambling Impact Study 1999:
  • ideation – 48-79%
  • attempts - 12-26%
  • debt - $38,000 to $113,000
ALMOST one in five suicidal patients seen by The Alfred hospital's emergency department is a problem gambler, figures from a groundbreaking program have shown.

The program, prompted by a nurse's curiosity over what tipped patients into crisis, is set to expand statewide.

The 17 per cent figure, which includes patients referred by mental health crisis teams, is about 20 times the rate of problem gambling in the community.

Bi-Polar disorders

Other addictions – i.e., cocaine, meth

Issues of abuse:

- emotional abuse – 69%
- physical abuse – 46%
- sexual abuse – 28%
• Welte et al. (2001) found higher rates of current problem and pathological gambling in African Americans (11.5%), Hispanics (7.7%), Asian Americans (7.7%), and Native Americans (13.2%) than that discovered in the Caucasian population (3.5%).

• Nancy Petry, in research done for the Connecticut Department of Health and Human Services, found that 60% of Southeast Asians surveyed in 2003 were classified as probable pathological gamblers.
Age Risk Factors: Young Adults

- Greater risk than older persons
- Prefer action games
- Desire excitement
- Co-occurring alcohol/drug abuse
- Conduct/behavioral problems
- Socialization
- Brain development: reasoning, decision-making, inhibitions (stop factor)
• Lower risk but more vulnerable (Time & Income)
• Prefer slots and other passive games
• Reasons to gamble
  • relaxation
  • boredom
  • passing time
  • getting away for the day
• Socialization
• Growing participation
  • 1975: 35% of those older than 65 had gambled
  • 1998: 80% of those older than 65 had gambled
Special populations within problem gambling: Adolescents

- Prevalence: 4-8% probable pathological (Disordered) gamblers
- 10-15% at risk for problem gambling
- 1.1 million youth 12-17 exhibit pathological gambling behaviors
- 5 million youth with serious gambling related problems
- 40-60% of youth gamble with family members
- 80-90% of parents know their children gamble for money and do not object
- Adolescents with gambling problems (age 14-17) are at higher risk for suicidal thoughts and attempts
- Gambling is the new “rite of passage” instead of alcohol

J. Derevensky, 2005: presentation at Midwest Conference on Problem gambling and Substance abuse
Special populations within problem gambling: Adolescents

Profile:
- Predominantly male
- Higher levels of anxiety
- Family discord and poor peer relationships
- Preoccupation with gambling
- Sports betting, cards and Video
- Serious financial problems, failure in school or work
- Lying to family and friends (friends typically have similar gambling problems)
- Stealing from family, friends, stores, etc.
- Depression – gambling to escape and feel better
- Lacks effective coping and problem solving skills
- Need for arousal or strong sensations
- Confused about whether or not they want to stop

J. Derevensky, 2005: presentation at Midwest Conference on Problem gambling and Substance abuse
Special Populations within problem gambling: Women

- 54% self-report co-morbid addictions
- 70% self-report prior mental health treatment
- 35% married to chemically dependent men
- 26% report prior suicide attempts (of those in treatment)
- 40% have an addicted parent
- Have quicker progression rates (for all addictions)
- Are less likely to seek treatment
- Experience more abuse and isolation

Deb Hammond: 2005 presentation to Nebraska Spring Conference on Problem Gambling
Predisposing factors for women gamblers:

- History of abuse or neglect
- Family history of addiction
- Relationship difficulties (divorce, domestic violence, or isolation)
- Death (parent, spouse/partner, pet, child, close friend or relative)
- Fear of own death
- Physical health problems / chronic pain
- Menopause
- Loss of finances / home
- Loss of youth
- Raised in low income home/family
Predisposing factors continued:

- Empty nest syndrome
- Unresolved grief
- Personality factors (Axis II Dx, ADD (ADHD), Impulsivity, people pleasers, passive-aggressive)
- Chronic stress
- Lack of leisure activities
- Boredom
- Loneliness
- Other mental health conditions (depression, anxiety, PTSD)

Deb Hammond: 2005 presentation to Nebraska Spring Conference on Problem Gambling
Researchers found those players who perceived they were on a winning streak gambled more and more recklessly and lost.

“Like individual investors who expect stocks that have recently risen in price to continue to gain in value, people who had just won many bets would wager too much on hands that were likely to lose,”

“Know when to hold ‘em and know when to fold ‘em” is an adage that doesn’t seem to apply to gamblers who are winning big, according to research conducted at the University of Notre Dame.
• Most common forms of illegal activity with PG
  • Writing bad checks / Identity theft
  • Embezzlement
  • Robbery
  • Blackmail
  • Tax Fraud
  • Prostitution
  • Theft

• Survey of GA: 46% reported stealing to gamble and 39% reported being arrested
• 1 in 5 inmates is a problem (diagnosable) gambler
  • Probation numbers around 10%
  • Nebraska study 2006 higher number (22%)
Lifetime Prevalence of PG in Corrections
Compulsive gamblers carry on making bets even when they are on a losing streak because a near miss rewards their brains almost as much as a win:

- Researchers found that the brains of problem gamblers react more intensely to near misses than casual gamblers, producing the reward hormone dopamine.

- The University of Cambridge results could help explain what keeps problem gamblers betting even though they keep losing.

*Dr Luke Clark of the University of Cambridge*
A study has found that a part of the brain that controls fear may prevent gambling, even when the estimated benefit is greater than the cost. Conversely, those whose amygdala’s, containing the brain's fear responses, are damaged were found to gamble even when the odds are against them, like problem gamblers.

California Institute of Technology and the University College of London
- My system of play will eventually prove to be successful.
- “Knowing” when a machine is about to pay big.
- \textbf{Past outcomes are good predictors of future chances}.
- Fallacy of “chasing” – continue to bet more money, despite losing, with thought of eventual win.
- \textbf{Illusion of control or influence over electronic machines}.
- Larger periods of play will produce better results.
- Gambling success was more of an internal cause than “luck.”
- \textbf{Illusion of control} – belief in a higher level of probability than actually exists.
- Skill comes into play when the outcome is actually entirely based on probability.
- \textbf{Early or initial winning creates a belief that future outcomes will be similar}.
In sports betting – my favorite team is expected to win.
I have lost so much, it’s too late to cut my losses now.
Gambling is a legitimate way to make money.
Suicide is seen as the solution to self-created problems
Belief in a personal relationship to “luck.”
Gambling is the only way I can make as much as I need to get out of debt.
I’m a strong-willed person; I know I can quit when I decide to.
I always pay my debts, I can’t have a problem with gambling.
I go to work every day, I pay my bills, I can’t have a problem.
I’m respected by the other guys I gamble with.

1. Did you ever lose time from work or school due to gambling?
2. Has gambling ever made your home life unhappy?
3. Did gambling affect your reputation?
4. Have you ever felt remorse after gambling?
5. Did you ever gamble to get money with which to pay debts or otherwise solve financial difficulties?
6. Did gambling cause a decrease in your ambition or efficiency?
7. After losing did you feel you must return as soon as possible and win back your losses?
8. After a win did you have a strong urge to return and win more?
9. Did you often gamble until your last dollar was gone?
10. Did you ever borrow to finance your gambling?
11. Have you ever sold anything to finance gambling?
12. Were you reluctant to use "gambling money" for normal expenditures?
13. Did gambling make you careless of the welfare of yourself or your family?
14. Did you ever gamble longer than you had planned?
15. Have you ever gambled to escape worry or trouble?
16. Have you ever committed, or considered committing, an illegal act to finance gambling?
17. Did gambling cause you to have difficulty in sleeping?
18. Do arguments, disappointments or frustrations create within you an urge to gamble?
19. Did you ever have an urge to celebrate any good fortune by a few hours of gambling?
20. Have you ever considered self destruction or suicide as a result of your gambling?
1. Is the person in question often away from home for long, unexplained periods of time?
2. Does this person ever lose time from work due to gambling?
3. Do you find yourself constantly bothered by bill collectors?
4. Do you feel that this person cannot be trusted with money?
5. Does the person in question faithfully promise that he or she will stop gambling; beg, plead for another chance, yet gamble again and again?
6. Does this person ever gamble longer than he or she intended to, until the last dollar is gone?
7. Does this person immediately return to gambling to try to recover losses, or to win more?
8. Does this person ever gamble to get money to solve financial difficulties or have unrealistic expectations that gambling will bring the family material comfort and wealth?
9. Does this person borrow money to gamble with or to pay gambling debts?
10. Has this person’s reputation ever suffered due to gambling, even to the extent of committing illegal acts to finance gambling?
Case management does NOT focus simply on gambling, but instead on all needs of a client.

• Assess the following areas:
  • Initial problem and background to problem
  • Current living situation
  • Education
  • Relationships
  • Work
  • Legal
  • Financial

• Answering questions:
  • What will make life more stable
  • Strengths the client has / resources
  • How well is the person functioning

• Recommendations / Referrals
- Individual or family sessions
- Fee Reduction
- Assist with immediate financial concerns
- **Credit Report (Credit Karma – Start here)**
- Accountability plan
- Changing thoughts about money
- **Family involvement in recovery budget**
- Identifying ways to limit access to money
- Wealth Protection Plan
- **Build a budget**
- One gambling establishment in a county correlates with 18% higher bankruptcy rates.
- Mean unsecured debt for those filing bankruptcy was $40,000
- Average of 6 credit cards
- Bankruptcy is a last resort

A 2006 study shows that bupropion SR may be effective as naltrexone in the treatment of pathological gambling.

- Subsequent findings from a Minnesota clinical setting suggests that a majority of pathological gamblers improve with medication treatment. **Naltrexone, or augmentation of naltrexone with an SSRI, appears to be most effective in relieving gambling symptoms.**
In the first subtype, gamblers who are driven by urge responded well to treatment with medications that block the brain’s opioid system (e.g., naltrexone) or certain receptors for the neurotransmitter glutamate (e.g., memantine). Grant also found that family history plays an important role in refining this group even further. People with a family history of addiction responded even better to the opioid blocker, which has been shown in other studies to decrease the urge to use substances such as alcohol.

The second subtype, gamblers who have difficulty inhibiting their behaviors and react to the smallest desires, respond well to medications that act on a specific enzyme, catechol-O-methyltransferase (COMT), which plays a major role in the function of the prefrontal cortex. Researchers found that decreasing the function of COMT can increase one’s ability to inhibit their desire to gamble. (Generally used in TX of Parkinsons Disease)

• Kim SW, Grant JF, Adson DE, Shin YC. Double-blind naltrenone and placebo comparison study in the treatment of pathological gambling. Biol Psychiatry. 2001;49(11):914-21

• The authors of the study concluded: The efficacy of NAC lends support to the hypothesis that pharmacological manipulation of the glutamate system might target core symptoms of reward-seeking addictive behaviors such as gambling. Larger, longer, placebo-controlled, double-blind studies are warranted.

• Similar studies of N-acetyl cysteine have shown it can curb drug addictions in animals. However, the researchers of the current study believe their study was the first to look at the effects of a glutamate-modulating agent in pathological gamblers. The researchers are currently investigating whether NAC could help methamphetamine users quit.
